Question 1

Question Type: MultipleChoice

Which three application types can you create and edit Groovy Rules?

Options:

A- FreeForm
B- Hybrid
C- Custom
D- Module (Enterprise)
E- Reports

Answer:

A, C, D

Question 2

Question Type: MultipleChoice

You want to associate events with a prediction. Which two statements about configuring insights with events are true?

Options:

A- For an event that regularly repeats but doesn't occur at exactly the same time each year, you can specify an exact date.
B- You can define an event but choose to not include data from that event in the prediction.
C- If you have configured events, they are included by default for the IPM insights job you schedule.
D- When you set up events, they are automatically included in prediction calculations.

Answer:

B, C

Question 3

Question Type: MultipleChoice

Before users can start using Workforce, Workforce features need to be enabled. Based on your selections, dimensions, drivers, forms, and accounts are populated. In most cases, you can come back later and incrementally enable additional features. Which of the following is an exception when enabling Workforce?

Options:

A- If you want to map multiple Projects with Workforce, you must import Resource Classes in projects.
B- If you want to use Employee Demographics, you must select it the first time you enable features.
C- If you import asset details into Workforce, you must track the details of an asset the Asset Details dimension.
D- If you want to consolidate Workforce reports, you must use a custom template and push data to Strategic Modeling.

Answer:

B

Question 4

Question Type: MultipleChoice

You want to work with Forms 2.0 to develop your forecast. Which two statements describe Forms 2.0?

Options:

A- You can switch between two views for the form if the form designer set up the form with multiple views.
B- You can use the Forms 2.0 features in forms specifically designed for Forms 2.0.
C- You can build logic into how a cell value is calculated by adding line-item detail.
D- You can use a tree-based member selector to select members from the POV.

Answer:

C, D

Question 5

Question Type: MultipleChoice

When importing data into Planning using a scheduled job, which option allows you to load data from the server?

Options:

A- You select the data locally
B- You select data load files from the inbox
C- You select the Include Metadata option
D- You refresh the database after importing data

Answer:

C

Question 6

Question Type: MultipleChoice

You want to allocate project expenses to one or more capital assets.

Which two statements describe what you need to set up in Projects or Capital to share the data?

Options:

A- In Capital, under Expenses, select Integration from Projects.
B- In Projects, under Expenses, select Integration with Capital.
C- In Capital, on the Enable page, in Map/Rename Dimensions, add a custom dimension called Project.
D- In Projects, on the Enable page, enable projects of type Capital.

Answer:

B, D

Explanation:

To allocate project expenses to one or more capital assets in Oracle Planning 2024

Implementation, integration between the Projects and Capital modules must be established. Two specific setup steps are required to enable this data sharing:

B . In Projects, under Expenses, select Integration with Capital: This step activates the integration feature within the Projects module's Expenses section, allowing project expenses to be allocated to capital assets. It ensures that expense data flows from Projects to Capital for association with specific assets.

D . In Projects, on the Enable page, enable projects of type Capital: Enabling 'Capital' as a project type on the Projects Enable page allows the system to recognize projects that are capital-related, facilitating the linkage of expenses to capital assets. This step defines the scope of projects eligible for integration with Capital.

A . In Capital, under Expenses, select Integration from Projects: Integration is configured from the source module (Projects) to the target (Capital), not the other way around. Capital receives data but does not initiate the integration.

C . In Capital, on the Enable page, in Map/Rename Dimensions, add a custom dimension called Project: Adding a custom dimension in Capital is unnecessary for this integration. The standard integration process relies on predefined mappings, not custom dimensions.

Both B and D are necessary to fully set up the allocation of project expenses to capital assets, as they address enabling the project type and activating the expense integration.

Oracle Enterprise Performance Management Cloud Documentation: 'Administering Projects -- Integration with Capital' (docs.oracle.com, updated 2024). Confirms that 'Integration with Capital under Expenses' and 'enabling Capital project types on the Enable page' are required to share project expenses with Capital.

Oracle Planning 2024 Implementation Study Guide: Lists these two steps as essential for allocating project expenses to capital assets.

Question 7

Question Type: MultipleChoice

You want to create dashboards with Dashboards 2.0. Which two statements are true about designing in Dashboards 2.0?

Options:

A- You can include chart types such as Waterfall, Pyramid and Geomap and new subchart types for Radar, Combination and Gauge.
B- The total amount of data that's allowed to be visualized in a chart is a total of 1,000 cells.
C- There is an upper limit of 15 members across all dimensions that can be selected to create a

chart using quick analysis.
D- You can include a maximum of 12 components.

Answer:

A, D
