Question 1

Which of the following statements is true? Select the correct answer.

Options:

A- A composition member is a service that is not composed by other services.

B- A composition member is a service that is composed by another service.

C- A composition member is the same as a sub-controller.

D- None of the above statements are true.

Answer:

B

Question 2

Which of the following statements are true? SELECT ALL THAT APPLY

A- The application of service-orientation leads to reduced awareness of underlying service implementation details because the Service Abstraction principle advocates limiting what is published about services.

B- The application of service-orientation leads to increased consistency in how functionality is expressed in the service contract because the Service Reusability principle advocates deferring service contract information at runtime.

C- The application of service-orientation leads to increased behavioral predictability and increased availability and scalability as a result of applying the Service Autonomy and Service Statelessness design principles.

D- The application of service-orientation leads to increased awareness of available services because the Service Discoverability design principle advocates improving the communications quality of published service information.

Answer:

A, C, D

Question 3

Question Type: **MultipleChoice**

When referring to the Service Discoverability principle, the quality of interpretability refers to a service's ability to be effectively discovered at runtime by service consumer programs designed to carry out dynamic runtime discovery. Select the correct answer.

Options:

A- True

B- False

Answer:

B

Question 4

Question Type: MultipleChoice

Fill in the blank for the following definition for the Service Loose Coupling design principle: "Service contracts impose low _____ requirements and are themselves decoupled from their surrounding environment." Select the correct answer.

Options:

A- consumer coupling

B- granularity

C- legacy encapsulation

D- state deferral

Answer:

A

Question 5

Question Type: MultipleChoice

A(n) _____ in the extent to which a service needs to share resources with other parts of the IT enterprise will result in a(n) _____ of the service's overall _____. Select the correct answer.

Options:

A- decrease, decrease, standardization

B- increase, decrease, standardization

C- decrease, increase, autonomy

D- increase, increase, autonomy

Answer:

C

Question 6

Question Type: MultipleChoice

Fill in the blank for the following definition of the Service Abstraction design principle: "_____ only contain essential information and information about services is limited to what is published in service contracts." Select the correct answer.

Options:

A- Service messages

B- Service contracts

C- Service types

D- Service activities

Answer:

B

Question 7

Question Type: MultipleChoice

Fill in the blank for the following definition of the Service Reusability design principle: "Services contain and express _____ logic and can be positioned as reusable enterprise resources." Select the correct answer.

Options:

A- non-agnostic

B- agnostic

C- distinct

D- new

Answer:

B

Question 8

The Service Abstraction principle emphasizes the need to reveal as much of the underlying details of a service as possible in order to support the Service Discoverability principle in its goal of maximizing the quantity of published information about a service. Select the correct answer.

Options:
A- True

B- False

Answer:
B

Question 9

A service's functional context determines its: Select the correct answer.

Question 10

The "contract first" approach to building services helps realize contract-to-logic coupling. Select the correct answer.

A- True

B- False

Answer:

B

Question 11

Which of the following statements does not make sense? Select the correct answer.

Options:

A- By applying the Standardized Service Contract principle, the amount of data model transformation logic required by my solution has been reduced.

B- Since the design standards created in support of the Standardized Service Contract principle have been more widely enforced, I've noticed the same data models being shared by more services.

C- It is thanks to the Standardized Service Contract principle that we have been able to better isolate our services so as to reduce their dependency on shared databases.

D- All of these statements make sense.

Answer:

C
