Question 1

Question Type: MultipleChoice

The reason a governance specialist may need to be involved in pre-deployment project phases is because:

Options:

- A- governance is a sub-process of the service-oriented design process
- B- governance considerations need to be taken into account so that eventual governance impact can be assessed
- C- on most SOA projects, the governance specialist role is assumed by the same individuals that carry out the analysis of services
- D- None of the above.

Answer:

B

Question 2

Question Type: MultipleChoice

Which of the following is not a common role on an SOA project?

Options:

- A- service custodian
- B- schema custodian
- C- policy custodian
- D- silo custodian

Answer:

D

Question 3

Question Type: MultipleChoice

A project team that delivers a reusable agnostic service may be tempted to skew the design of the service so that it better fulfills the project's immediate requirements. The _____ role is commonly used to assume ownership over the service in order to prevent this from happening by protecting the service's integrity.

Options:

- A- service analyst
- B- service developer
- C- service custodian
- D- None of the above.

Answer:

C

Question 4

Question Type: MultipleChoice

Service discovery requirements can introduce the need to establish a service registry.

Options:

- A- True

B- False

Answer:

A

Question 5

Question Type: MultipleChoice

Which of the following is a common service composition testing consideration?

Options:

- A-** determine whether all possible service activities and service compositions have been mapped out
- B-** determine whether services in the service composition comply with existing design standards
- C-** determine whether architectural extensions (such as transactions, reliable messaging, etc.) are required to successfully carry out the service composition logic
- D-** All of the above.

Answer:

D

Question 6

Question Type: MultipleChoice

Once a service is deployed and in use by service consumers, the responsibility for the service typically transfers from the _____ to the _____ and _____.

Options:

- A- service analyst, service developer, service architect
- B- service developer, service analyst, service architect
- C- service architect, service custodian, governance specialist
- D- service architect, quality assurance specialist, service analyst

Answer:

C

Question 7

Question Type: MultipleChoice

Which of the following are considered best practices for measuring the compliance of a service with its expected quality of service levels during the service testing phase?

Options:

- A-** The supporting infrastructure should be tested to determine thresholds and other limitations.
- B-** Services should be tested individually and as part of service compositions.
- C-** The service being tested should be called at a rate which is greater than or equal to its expected rate of call.
- D-** Statistics collected during the service testing phase should be documented in the service profile.

Answer:

A, B, C, D

Question 8

Question Type: MultipleChoice

A service candidate is the equivalent to a technical service contract.

Options:

A- True

B- False

Answer:

B

Question 9

Question Type: MultipleChoice

When comparing the role of programmers on an SOA project to the role of programmers on a traditional silo-based development project, which of the following statements is true?

Options:

- A-** Programmers on SOA projects are often required to solve more complex design problems and make many more design decisions.
- B-** Programmers on SOA projects are often required to collaborate directly with business analysts and governance specialists in order to model and develop services that properly encapsulate business logic.
- C-** Programmers on SOA projects are often given less freedom to apply creativity to the development process because they are required to follow design standards that pre-determine several design decisions.
- D-** None of the above.

Answer:

C

Question 10

Question Type: MultipleChoice

The reason why service testing is comparable to commercial software testing is because:

Options:

A- Services (especially agnostic services) are delivered as multi-purpose software programs and therefore are expected to be reused under different circumstances, much like commercial software products.

B- Commercial product testing was heavily influenced by testing techniques used with object-oriented solutions. Therefore, because object-oriented design influenced the service-orientation design paradigm, there is a natural relationship between service testing and commercial testing approaches.

C- Commercial product testing advocates rapid application development methodologies that are supportive of top-down SOA project delivery approaches, resulting in a natural relationship between service testing and commercial testing approaches.

D- None of the above.

Answer:

A

Question 11

Question Type: MultipleChoice

A typical service-oriented design process follows the recommended approach of contract-first design.

Options:

A- True

B- False

Answer:

A
