Question 1

With the "Internet" being valued and the rise of big data and cloud computing, related technologies have entered like mushrooms

In your vision, one of the most widely used and valued is Docker. The following incorrect statement about Docker is

Options:

A- Docker can package the underlying environment of applications to ensure that applications can still run normally after migration

B- Docker needs to create a virtual layer, virtual operating system, etc. on the host or host operating system, and then installation

C- Docker launches faster than other virtual machine technologies

D- Docker runs with containers, which are running instances created from Image

Answer:

B

Question 2

The KVM virtualization architecture includes KVM modules, QEMU and Libvirt. The following incorrect description of these modules is

Options:

A- KVM module is mainly responsible for the creation of Vcpu and the allocation of virtual memory

B- KVM + QEMU can constitute a set of virtualization solutions

C- Libvirt + QEMU can constitute a set of virtualization solutions

D- QEMU is mainly responsible for I / O operation simulation

Answer:

C

Question 3

Question Type: **MultipleChoice**

In Huawei FusionCompute, a Linux-based virtual machine is created. In this scenario, the host OS Running at

A- VNA

B- CNA

C- VRM

D- Linux virtual machine

Answer:

B

Question 4

Question Type: MultipleChoice

In Huawei FusionCompute, the correct description of the method for logging in to the virtual machine is . [Multiple choice]

Options:

A- The virtual machine does not have an IP address, and the administrator can log in through VNC. so VNC gets rid of its dependence on the network

B- If the operating system of the virtual machine is windows, the administrator can log in to the virtual machine through remote desktop

C- Administrators can log in to a virtual machine with any operating system installed through VNC

D- If the operating system of the virtual machine is Linux, the administrator can log in to the virtual machine through remote desktop

Answer:

B, C

Question 5

Question Type: **MultipleChoice**

In Huawei FusionCompute, if the Windows virtual machine has a blue screen, what operations can the system perform? [Multiple choice]

Options:

A- HA Virtual Machine

B- Recover a virtual machine using a snapshot

C- Restart the virtual machine

D- Not processed

Question 6

Question Type: MultipleChoice

In Huawei FusionCompute, the following incorrect description of the security group rule is.

Options:

A- When a virtual machine has multiple network cards, you can configure a security group for each network card.

B- A virtual machine can communicate with the outside world only after a security group is created and rules are added.

C- All virtual machine NICs in the same security group will use the security group rules for access control

D- The essence of a security group is a collection of rules

Answer:

B

Question 7

In Huawei FusionCompute, if there is only one physical network port in the bound network port, the physical network port cannot be removed directly.

Options:

A- True

B- False

Answer:

A

Question 8

In Huawei FusionCompute, the memory and CPU resources used by virtual machines can only be provided by the same cluster. Therefore, the maximum computing resources that virtual machines can actually use cannot exceed the sum of resources available to all hosts in the cluster

Options:

A- True

B- False

Answer:

B
