Question 1

Question Type: MultipleChoice

How can a developer help the business users to author rules in a way that improves performance?

Options:

- A-** Rewrite complex BAL rules as technical rules.
- B-** The way in which rules are written have no impact on performance.
- C-** Modify the BOM to remove the {this} placeholder to make the rules less verbose.
- D-** Make sure that conditions that test a collection of objects come before simpler conditions, to reduce the number of objects that later conditions in the rule must test.

Answer:

D

Question 2

Question Type: MultipleChoice

Which artifact is a supported execution object model (XOM) source?

Options:

A- C# classes

B- .JS classes

C- Java classes

D- TypeScript classes

Answer:

C

Question 3

Question Type: MultipleChoice

What are the possible results of running a test suite?

Options:

- A- Passed, Failed
- B- Running, Done, Retrying
- C- Active, Complete, Paused
- D- Successful, Failure, Error

Answer:

A

Explanation:

https://www.ibm.com/support/knowledgecenter/en/SSBLQQ_9.2.0/com.ibm.rational.rit.ref.doc/topics/c_ritref_test_suite_details.html

Question 4

Question Type: MultipleChoice

After a decision service is implemented in the Rule Designer, a developer would like to analyze the rule artifacts in the rule project by creating a query in the fije project. Which element can be found by the query?

Options:

- A- Function
- B- Rule task
- C- Parameter
- D- XOM class

Answer:

C

Question 5

Question Type: MultipleChoice

Categories named Vehicle and Customer have been added to a rule project. In the BOM of this rule project, a business element Car has been assigned categories Vehicle and Automobile and a business element Client has been assigned the category Customer. Which category filters need to be assigned to an action rule so that both the Car and Client business element are visible in the rule? Select two.

Options:

- A- Any
- B- All
- C- Client
- D- Vehicle and Client
- E- Vehicle and Automobile

Answer:

B, E

Question 6

Question Type: MultipleChoice

A developer is working with a mainframe legacy application. How can they build the execution object model (XOM) with the information from this application?

Options:

- A- Import the Cobol copybook.
- B- Extract objects through SQL queries.
- C- Use the Decision Engine API to map Cobol structures.
- D- Use the Rule Designer migration tool to convert the source Cobol copybook.

Answer:

A
