## Question 1

---

**Question Type: MultipleChoice**

---

What is the recommended tool for developing cloud foundry applications?

### Options:

---

- A- SAP Business Application Studio
- B- SAP HANA Cloud Central
- C- SAP HANA Web IDE
- D- SAP HANA cockpit

### Answer:

---

A

## Question 2

---

**Question Type: MultipleChoice**

---

Why would an SQL developer work with SQLScript? Note: There are 3 correct answers to this question.

**Options:**

---

- A- To automate the generation of the code
- B- To pass parameters from calculation views
- C- To exploit additional data types
- D- To include ABAP syntax in the code
- E- To implement conditional logic

**Answer:**

---

B, C, E

## Question 3

---

**Question Type:** MultipleChoice

---

When is the first column store compression executed?

**Options:**

---

- A- When a delta merge is triggered
- B- When the table is created
- C- When partitions are regenerated
- D- When a backup is started
- E- Question

**Answer:**

---

A

## Question 4

---

**Question Type: MultipleChoice**

---

What are the key steps to implement currency conversion in a calculation view?

**Options:**

---

- A- Enable the measure for conversion Choose client, source, and target currencies Choose conversion date and rate type Deploy the

conversion rule

**B-** Enable the measure for conversion/Choose client, source, and target currencies/Choose conversion date and rate type/Assign the conversion rule to your calculation view

**C-** Assign semantic type/Choose client, source, and target currencies/Choose conversion date and rate type/Define an expression in a calculated column

**D-** Assign semantic type Enable the measure for conversion/Choose client, source, and target currencies/Choose conversion date and rate type

**Answer:**

---

D

## Question 5

---

**Question Type: MultipleChoice**

---

Which of the following approaches might improve the performance of joins in a CUBE calculation view?Note: There are 2 correct answers to this question.

**Options:**

---

- A- Specify the join cardinality
- B- Limit the number of joined columns
- C- Use an inner join
- D- Define join direction in a full outer join

**Answer:**

---

A, B

## Question 6

---

**Question Type:** MultipleChoice

---

Why would you use the Transparent Filter property in a calculation view?

**Options:**

---

- A- To include columns that are NOT requested by a query
- B- To avoid columns being unnecessarily used in an aggregation
- C- To apply filters that are hidden from the end user

**D-** To allow filter push-down in stacked calculation views

**Answer:**

---

B

## Question 7

---

**Question Type: MultipleChoice**

---

Why would you create calculation views of data category DIMENSION with type TIME?

**Options:**

---

**A-** To provide additional time-related navigation possibilities

**B-** To add a temporal condition to a join to find matching records from two tables based on a date

**C-** To store historical versions of attributes

**D-** To provide the time intervals required by time-dependent parent-child hierarchies

**Answer:**

---

A

## Question 8

---

**Question Type:** MultipleChoice

---

In SAP HANA Cloud, which tasks are handled by the cloud provider? Note: There are 3 correct answers to this question. Sizing, provisioning, and monitoring the database

### Options:

---

- A- Tuning the database to run optimally on the underlying operating system, and hardware
- B- Managing users, roles, and permissions in the database
- C- Backing up the operating system and the database software
- D- Installing, configuring, and upgrading the operating system

### Answer:

---

A, C, D

## Question 9

---

**Question Type:** MultipleChoice

---

Why might you use the Keep Flag property in an aggregation node?

### Options:

---

- A-** To ensure that the aggregation behavior defined in the aggregation node for a measure CANNOT be overridden by a query
- B-** To exclude columns that are NOT requested by a query to avoid incorrect results
- C-** To include columns that are NOT requested by a query but are essential for the correct result
- D-** To retain the correct aggregation behavior in stacked views

### Answer:

---

C

## Question 10

---

**Question Type:** MultipleChoice

---

Why would you use parameter mapping in a calculation view? Note: There are 2 correct answers to this question.

**Options:**

---

- A- To pass variable values to external value help views
- B- To assign variables to one or more attributes
- C- To push down filters to the lowest level calculation views
- D- To convert the data types of input parameters

**Answer:**

---

A, C
