Question 1

Question Type: MultipleChoice

You have created a new Integration branch and did not receive the administrator email with the password reset link. What is prohibiting the email from sending?

Options:

- A- You have not enabled the Magento Email module with bin/magento module: enable
- B- The Outgoing Emails setting is disabled under Environment Settings in the Project Web UI
- C- Email is always disabled on all integration branches
- D- You have not configured SendGrid for this environment

Answer:

C

Question 2

Question Type: MultipleChoice

To secure composer credentials you want to remove the auth. json file from the project repository How do you do that?

Options:

- A- The build phase runs on a separate server and variables are not available there you must keep the credentials in the auth. json file, but you can replace the password with its hash
- B- Add the env:COMPOSER_AUTH variable on the project level and make it visible on the build phase
- C- Put the composer credentials into/mnt/build/.config/composer/auth.json
- D- Add the composer_auth variable with the sensitive option enabled

Answer:

B

Question 3

Question Type: MultipleChoice

A merchant with three websites using en_GB, fr_FR and de_AT requires a change in locale to de_DE for the German Production website After running the following command on Production you notice the frontend design of the German website is broken:

Php bin/magento config:set --scope=websites --scopes code=germ general /local./code de_DE

Static content deployment is set up to on the deploy phase

Why did this happen?

Options:

- A- Static Content is not pre-generated for the de_DE locale
- B- de_DE is not writeable in pub/static and has to be configured via the .magento.app.yaml file
- C- The magento-cloud environment: deploy command has not been run yet to generate static content for the new locale
- D- STA'IC_CONTENT_SYKLINK is not Configured in the .magento.env.yaml file

Answer:

A

Question 4

Question Type: MultipleChoice

You want to improve the ability to monitor Production deployments by setting up an email notification system How do you achieve this?

Options:

- A- Enable Deployment Notifications under Configure Environment > Settings in the Protect Web
- B- Build a custom module which hooks into the deployment phase and sends emails in real-time
- C- Configure log notifications in the .magento.env.yaml file
- D- Use the magento-cloud environment:deploy:email command to enable email notifications

Answer:

B

Question 5

Question Type: MultipleChoice

After making changes to custom commands in the deploy and build phases you deploy to Staging. The deployment takes much longer than expected, and Staging is in maintenance mode for most of this time.

What do you do to reduce site downtime?

Options:

- A- Set the SKIP_MAINTENANCE_SCD variable to true In the . magento. env. yaml file
- B- Add a custom command to the post_deploy phase to activate deferred deployment
- C- Move custom commands from the deploy phase to the build phase.
- D- Update the SCD_MATRIX variable to include only necessary custom commands

Answer:

C

Question 6

Question Type: MultipleChoice

The merchant wants to offer specific pricing in different currency markets so you have set up multiple websites to cover each currency.

Now they want customers to be directed to the appropriate website based on the country they are in.

How do you configure this?

Options:

- A-** Use the Country Mapping in the Fastly settings to map country codes to store views
- B-** In the Project Web UI. enable the Website IP Mapping setting
- C-** Update magento-vars.php to detect the country code from the IP address and map it
- D-** Build or install a Magento extension that changes the default currency code on application init

Answer:

A

Question 7

Question Type: MultipleChoice

Your project is in a phase where the locales that will be used are still being determined. You need to configure your project in a manner that will allow them to be changed dynamically

How can you accomplish this?

Options:

- A-** Remove the system/default/general/locale configuration from the app/etc/config.php file

- B-** Configure SCD_ON_DEMAND to true in the .magento.env.yaml file
- C-** Run the command vendor/bin/ece-tools locales:unlock on the environment
- D-** Configure DYNAMIC_LOCALES in the SCD_MATRIX to true in the .magento.env.yaml file

Answer:

B

Question 8

Question Type: MultipleChoice

After installing a Magento extension that implements a new class for a site and deploying this to an integration environment you see it is not working.

```
The specified /app/generated/code/MyCompany/MyModule/MyClassFactory.php could not be written  
failed to open stream: Read-only file system
```

In the logs you discover the following error:

How do you fix this?

Options:

- A-** A support ticket should be riled with Magento Commerce Cloud to fix the filesystem issue
- B-** The extension should be modified so it does not write to generated at runtime
- C-** The file should be generated locally and pushed via Git
- D-** The generated_code_WRITABLE variable should be set to true whenever using extensions

Answer:

A

Question 9

Question Type: MultipleChoice

You are tasked to improve the user experience of the most visited product pages after deploying releases to Production. The aim is to reduce initial page load times.

How do you achieve this?

Options:

- A-** Create a custom build command and use CURL to cache the page

- B-** Use the Magento Admin to configure Fastly to cache the pages after deployment
- C-** Modify the post_deploy hook in the .magento.app.yaml file to include the URLs as arguments to the ece-tools command
- D-** Use the warm_up_PAGES variable in the .magento.env.yaml file to cache the pages during postdeploy

Answer:

D

Question 10

Question Type: MultipleChoice

You added the env:ADMIN_PASSWORD variable in the Project Web UI to change a Magento admin user's password After deployment you are unable to login using the new password

What causes this?

Options:

- A-** When you add a variable. the build stage is being skipped because the codebase has not been changed You must push a commit to trigger a full deploy
- B-** Deploy scripts read configuration from the environment variable called magento_cloud_variables. which contains an array of variables

which were set without the env: prefix

C- Variables which are set using the Project Web UI are not available on the build phase the admin password variable should be set in the .magento.env.yaml file

D- The sensitive option is required for env:ADMIN_PASSWORD variable

Answer:

D

Question 11

Question Type: MultipleChoice

You need to disable a module on a Magento Commerce 2.3 Cloud project and remove its database tables. The module uses the declarative schema system to manage its database changes.

Which action do you take?

Options:

A- Run bin/magento module:disable MyCompany_MyModule on the local environment and then commit and deploy the app/etc/config.php file

- B-** Run `bin/magento module:disable MyCompany_MyModule` on the production environment and download and commit the `app/etc/config.php` file
- C-** Delete the module from the git repository leaving the record in `app/etc/config.php` Intact and deploy the changes
- D-** Remove the module line from the `app/etc/config.php` file on the local environment and then deploy the file

Answer:

A
