Question 1

Question Type: MultipleChoice

An Adobe Commerce Developer is tasked to frequently send data to a third-party API. The API utilizes a JSON Web Token (JWT) that expires every hour. The developer decides to store the JWT in a custom cache.

Which step should the Developer take to implement this new custom cache type correctly?

Options:

- A- Define the custom cache type in the di.xml, ensuring the cache model implements CacheInterface.
- B- Define the custom cache type in cache.xml with a unique name and instance.
- C- Define the custom cache type directly in system.xml at the website level.

Answer:

B

Question 2

Question Type: MultipleChoice

A recent client-reported bug is fixed by the Adobe Commerce community. The Adobe engineering team has not yet released the patch or committed the bug fix to GitHub. A Developer acquires the custom patch and releases it to their Adobe Commerce environments.

What are the recommended steps the Developer should follow to implement the custom patch for the bug fix?

Options:

- A- Install only official patches supplied by them to maintain upgradability.
- B- Update the quality-patches module and list the required patch in the magento-ce-patch.yaml file.
- C- Install the cweagans/composer-patches module and edit the composer.json file to apply the custom patch.

Answer:

C

Question 3

Question Type: MultipleChoice

A Developer creates daily cron jobs to automate a client's business processes, including automated stock imports via CSV files once per day. After a few days, it is noted that the cron jobs do not run daily. The Developer discovers the cron jobs are sometimes assigned a 'missed' status and do not execute, and other cron jobs become stuck during the execution time of the custom cron jobs.

Which option should the Developer use to ensure the cron jobs consistently run each day?

Options:

- A- Implement a custom group for the cron jobs in the crontab.xml.
- B- Set the cron jobs to run multiple times per day instead of once daily.
- C- In the execute() function, implement a lock checker to make sure the cron runs alone.

Answer:

A

Question 4

Question Type: MultipleChoice

A customer wants their Adobe Commerce Cloud platform to be upgraded to the latest available official version. They would like to assess the compatibility of their current version compared to the upgraded version.

How should the Developer gather this information and compile an upgrade plan for the customer?

Options:

- A- Run the Site-Wide Analysis Tool (SWAT) which provides detailed information on the system.
- B- Familiarize themselves with the minimum system requirements of Adobe Commerce.
- C- Run the command `bin/magento upgrade:compatibility:report` to export the needed information.

Answer:

C

Question 5

Question Type: MultipleChoice

A Developer connects to a Magento-Cloud CLI and creates a new branch for environment using the following Git command: `git checkout -b`

The developer notices the branch is not activated and does not automatically build when changes are pushed to the remote environment.

Which solution will fix this issue?

Options:

- A- `magento-cloud environment:branch` should be used instead of Git commands.
- B- `magento-cloud environment:redploy --no-wait` should be executed after branch creation.
- C- `git branch -b` should be used instead of Git checkout.

Answer:

A

Question 6

Question Type: MultipleChoice

A client uses a straightforward custom payment method which allows a pregenerated code to be used as payment. The code is provided directly to customers through email and other communications. The client reports a problem with someone fraudulently guessing the codes correctly. They want to implement an API check that ensures the code exists in their system when the code is applied.

Where should the Developer add this change?

Options:

- A- Create a before plugin on the `canCapture` method and implement the API check there.
- B- Create a custom validator that will check for this code at the time the order is placed.

C- Create an after plugin on the canAuthorize method and implement the API check there.

Answer:

B

Question 7

Question Type: MultipleChoice

An Adobe Commerce Expert is tasked with configuring different pricing for products across multi-site installation. Each website requires independent control of its prices while using the same catalog data.

What is the minimum store hierarchy structure required to achieve this?

Options:

- A- Multiple stores and a single store view for each store
- B- One website, one store, and multiple store views
- C- Multiple websites, each with one store and at least one store view

Answer:

C

Question 8

Question Type: MultipleChoice

A Developer discovers the following code snippet in default.xml layout:

Which caching behavior will occur?

Options:

- A- Only the custom block will not be cached.
- B- All pages will be marked as non-cacheable.
- C- The content block and all its child blocks will become cacheable.

Answer:

B
