Question 1

Question Type: MultipleChoice

Which of the following data volume types is not supported by Elastic Container Instance (ECI)?

Options:

A- EmptyDir

B- NFS

C- ConfigFile

D- FixedVolume

Answer:

A

Question 2

Question Type: MultipleChoice

Serverless Workflow allows you to orchestrate distributed tasks in sequence, branch, and parallel modes, and ensure that tasks are reliably coordinated according to your workflow logic. Which of the following service integration modes is not supported by Serverless Workflow?

Options:

- A- Request response mode
- B- Synchronization mode
- C- Asynchronous mode
- D- Waiting for callback mode

Answer:

B

Question 3

Question Type: MultipleChoice

you have a Node.js based application and you plan to migrate it to Alibaba Cloud Function Compute, which of the following steps is unnecessary?

Options:

- A- Manually install the Node. Js package in the Function Compute console
- B- Create a single web application and upload the corresponding code package via the Function Compute console (or fcli)
- C- Configure program startup commands and access ports in the Function Compute console
- D- Start and verify the application in the Function Compute console

Answer:

A

Question 4

Question Type: MultipleChoice

Assume that a company uses ApsaraDB for PolarDB. The company commonly queries users based on their basic information, including: addresses, company names, and ID numbers. In this scenario, what is the best practice for creating a database index (or indexes)?

Options:

- A- Create a b-tree index on each column to be searched.
- B- Create a hash index on each column to be searched.
- C- Create a gin index for multiple fields.
- D- Create a gist index for multiple fields.

Answer:

A

Question 5

Question Type: MultipleChoice

You can use Alibaba Cloud Data transmission service (DTS) or the open source tool Redis-shake to migrate and synchronize data from a local Redis instance to an Alibaba Cloud Redis instance. What is one feature which DTS has but Redis-shake does not?

Options:

- A- Full data migration
- B- Incremental data migration

C- One-way data synchronization

D- Two-way data synchronization

Answer:

A

Question 6

Question Type: MultipleChoice

Company A has a large number of files store in Alibaba Cloud OSS that need to be deleted (numbering in the tens of thousands). What is the fastest, easiest way to delete these files?

Options:

A- Manually delete them one by one

B- Configure a life cycle rule that matches the entire bucket, and delete all files after one day

C- Call the API from a script, deleting files in batches

D- Directly delete the bucket

Answer:

A

Question 7

Question Type: MultipleChoice

Which of the following options is correct, regarding Object ACL in Alibaba Cloud's Object Storage Service (OSS)?

Options:

- A-** Object ACL is an object-level (not bucket level) permission control mechanism. There are currently three levels of access rights: private, public-read, and public-read-write.
- B-** 'Private' indicates that an object is a private resource, that is, only the owner of the object has read and write permissions on the object, and other users can read but have no permission to modify or delete the object.
- C-** If the permissions of an object are not set, the permissions of the object are inherited from the bucket.
- D-** You can set the ACL associated with an object by examining the X-OSS-Object-ACL header in the HEAD request, when making the PutObjectACL API call.

Answer:

A

Question 8

Question Type: MultipleChoice

Which of the following is NOT a feature of Alibaba Cloud's Cassandra database service?

Options:

- A-** Centerless distributed architecture
- B-** Supports both narrow and wide tables, providing flexible schema functions
- C-** Cluster storage, strong expansion of read and write capabilities
- D-** Enterprise-level capabilities such as disaster tolerance, backup and recovery, security, and monitoring across data centers

Answer:

B
