Question 1

Question Type: MultipleChoice

Which of the following is NOT a feature of Alibaba Cloud's Cassandra database service?

Options:

A- Centerless distributed architecture
B- Supports both narrow and wide tables, providing flexible schema functions
C- Cluster storage, strong expansion of read and write capabilities
D- Enterprise-level capabilities such as disaster tolerance, backup and recovery, security, and monitoring across data centers

Answer:

B

Question 2

Question Type: MultipleChoice

A developer received a response code of 409 when trying to use a KMS key via the API. Given that a 409 response was returned, Which option states could the KMS key be in? (Number of correct answers: 3)

Options:

A- PendingDeletion
B- Pendinglmport
C- Disabled
D- PendingCreate

Answer:

A, B, C

Question 3

Question Type: MultipleChoice

A mobile application developer intends to use Alibaba Cloud Object Storage Service (OSS) to store the end user data for their app, and to ensure data isolation between each user of the app, to prevent one user from obtaining another's dat

a. Which method can be done to meet these requirements?

Options:

A- RAM Policy
B- STS authorization
C- Bucket Policy
D- Object Policy

Answer:

B

Question 4

Question Type: MultipleChoice

Which of the following descriptions of the principles of Alibaba Cloud SSL certificate private key protection is correct?

Options:

A- Alibaba Cloud uses the built-in functionality of the SSL certificate service to encrypt and store the private key to certificates private key
B- The plaintext of Alibaba Cloud's private key is usually stored on disk and backed up regularly
C- Alibaba Cloud Certificate Service uses symmetric encryption to save the certificate private key
D- Alibaba Cloud Certificate Service keys are loaded Into memory in plaintext format ONLY when needed

Answer:

B

Question 5

Question Type: MultipleChoice

What are the advantages of using Elastic Container Instance (ECI) to deploy applications compared with using ECS? (Number of correct answers; 2)

Options:

A- Low maintenance, low costs
B- Startup in seconds without the need to reserve resources
C- Less significant visualization layer performance losses
D- Stronger isolation between instances

Answer:

A, B

Question 6

Question Type: MultipleChoice

What are the benefits of creating indexes on PolarDB? (Number of correct answers: 2)

Options:

A- Improve the query efficiency SELECT statements.
B- Improve the efficiency of DML operations such as UPDATE.
C- Improve the efficiency of DDL operations.
D- Reduce invalid data scanning.

Answer:

A, D

Question 7

Question Type: MultipleChoice

A developer is writing logs through the Log Service API, and can see via the Logstore monitorin metrics that write traffic is about 10 MB/s, but a 403 error is reported during the writing process. Which of these is a possible cause?

Options:

A- There is significant network delay
B- The write throughput of a single partition is limited, and the 10 MB/s write traffic exceeds
C- There is not enough space in the Logstore partition
D- The target partition in the Logstore is not specified

Answer:

D

Question 8

Question Type: MultipleChoice

Which option best are correct, regarding RAM users? (Number of correct answers: 3)

Options:

A- RAM users can be created under a single Alibaba Cloud account, corresponding to employees, systems, or applications.
B- RAM users do not 'own' the resources that they create (those belong to the Alibaba Cloud account itself), and RAM users cannot generate and pay their own individual bills (costs accrue to and are billed to the master Alibaba Cloud account).
C- RAM users belong to an Alibaba Cloud account, but they can also operate as independent accounts with their own private resources, not visible to the primary Alibaba Cloud account.
D- RAM users must be authorized by the Alibaba Cloud account to log in to the console or use the API to manage the resources owned by the Alibaba Cloud account.

Answer:

A, C, D

Question 9

Question Type: MultipleChoice

Which of the following cloud services can be integrated with Alibaba Cloud KMS (Key Managed Service)? (Number of correct answers: 3)

Options:

A- Elastic Compute Service (ECS)
B- Object Storage Service (OSS)
C- Relational Database Service (RDS)
D- Server Load Balancer (SLB)
https://www.alibabacloud.com/help/doc-detail/141499.htm

Answer:

A, B, C

Question 10

Question Type: MultipleChoice

Which option best operations can be performed through Log Service sAPI? (Number of correct answers: 3)

Options:

A- Collect logs based on Logtail configuration and Logtail machine group information
B- Create a Logstore, write and read logs to the Logstore
C- Access control for different users
D- Deliver logs to OSS for storage and analysis

Answer:

A, B, C

Question 11

Question Type: MultipleChoice

CloudMonitor's "Event Monitoring" feature provides you with event reporting, query, and alarm functions, Score 2 so that you can collect metrics on your running Alibaba Cloud systems, and receive alerts when something goes wrong. Which option is NOT a correct description of the monitoring event types supported by CloudMonitor?

Options:

A- For ECS, CloudMonitor supports the collection and reporting of important ECS operating system level events, such as application crashes.
B- For Object Storage Service (OSS), CloudMonitor supports the collection and reporting of bucket upstream and downstream bandwidth which exceeds the flow control threshold or the user-selected reporting threshold.
C- For Server Load Balancer (SLB), CloudMonitor supports the collection and reporting of HTTPS certificate expiration events, for certificates installed on SLB.
D- For E-MapReduce, CloudMonitor supports the collection and reporting of service component status, cluster creation failure, and timeout events.

Answer:

C

Question 12

Question Type: MultipleChoice

You can create an event notification rule in Message Service and push notifications to the specified consumer in the form of messages, to receive events from specified Alibaba Cloud resources. Which of the following options are correct statements about the Message Service (MS) service? (Number of correct answers: 2)

Options:

A- Event Notifications can cross regions.
B- Message Service provides synchronous notifications to ensure the consistency between the message acknowledgment and event processing.
C- The event notification message is retained within the valid time. When you fail to receive an event message, the event notification message is retried based on the specified retry policy.
D- The consumer type of the event notification message can be HTTP Server, Queue, or Topic.

Answer:

B, C
