Question 1

Question Type: MultipleChoice

The following images include an Android code for SeekBar (id: MyseekBar) and one state of its operation. What does "Result" represent in this code?

```
class MainActivity : AppCompatActivity() {
    lateinit var slider: SeekBar
    lateinit var value: TextView
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        slider=MyseekBar
        value=Result
        slider.setOnSeekBarChangeListener(object :SeekBar.OnSeekBarChangeListener{
            override fun onProgressChanged(seekBar: SeekBar?, progress: Int, fromUser: Boolean) {
                value.text="Release your thumb to select .. "+progress.toString()
            }
            override fun onStartTrackingTouch(seekBar: SeekBar?) {
                value.text="Tracking Started ....." + slider.progress
            }
            override fun onStopTrackingTouch(seekBar: SeekBar?) {
                value.text="Thank you for selecting " + slider.progress
            }
        })
    }
}
```

Options:

- A) Result is the seekbar id.
- B) No any role for Result in this code.
- C) Result is the id of TextView widget which will show the result messages of SeekBar operation.

D) Result is the maximum value of SeekBar steps that can be moved.

Answer:

C

Question 2

Question Type: MultipleChoice

The following image includes Android code for an app that contains a button with an id : "Downloadbutton". When the app user clicks this button, a progress bar with id: "progressBar" will show up. What will happen if you change *rate+=10 illustrated with green underlined text to "rate+=50"?

```
class MainActivity : AppCompatActivity() {  
    var progressBarStatus = 0  
    var rate = 0  
    override fun onCreate(savedInstanceState: Bundle?) {  
        super.onCreate(savedInstanceState)  
        setContentView(R.layout.activity_main)  
  
        Downloadbutton.setOnClickListener { view ->  
            Thread(Runnable {  
                while (progressBarStatus < 100) {  
                    try {  
                        rate += 10  
                        Thread.sleep( millis: 500)  
                    }  
                    catch (e: InterruptedException) {  
                        e.printStackTrace()  
                    }  
                    progressBarStatus = rate  
                    progressBar.progress = progressBarStatus  
                }  
                progressBar.setVisibility(ProgressBar.INVISIBLE)  
            }).start()  
        }  
    }  
}
```

Options:

- A) No any change m progress bar work.
- B) The progress bar will finish within two steps only.
- C) You will get error and the app will not work.
- D) The progress bar will work before slowly than before.

Answer:

B

Question 3

Question Type: MultipleChoice

The following image includes Android code for an app that contains a button with an id : "Downloadbutton". When the app user clicks this button, a progress bar with id: "progressBar" will show up. What will happen if you change *rate+=10 illustrated with green underlined text to "rate+=50"?

```
class MainActivity : AppCompatActivity() {  
    var progressBarStatus = 0  
    var rate = 0  
    override fun onCreate(savedInstanceState: Bundle?) {  
        super.onCreate(savedInstanceState)  
        setContentView(R.layout.activity_main)  
  
        Downloadbutton.setOnClickListener { view ->  
            Thread(Runnable {  
                while (progressBarStatus < 100) {  
                    try {  
                        rate += 10  
                        Thread.sleep( millis: 500)  
                    }  
                    catch (e: InterruptedException) {  
                        e.printStackTrace()  
                    }  
                    progressBarStatus = rate  
                    progressBar.progress = progressBarStatus  
                }  
                progressBar.setVisibility(ProgressBar.INVISIBLE)  
            }).start()  
        }  
    }  
}
```

Options:

- A) No any change m progress bar work.
- B) The progress bar will finish within two steps only.
- C) You will get error and the app will not work.
- D) The progress bar will work before slowly than before.

Answer:

B

Question 4

Question Type: MultipleChoice

The following images include an Android code for SeekBar (id: MyseekBar) and one state of its operation. What does "Result" represent in this code?

```
class MainActivity : AppCompatActivity() {
    lateinit var slider: SeekBar
    lateinit var value: TextView
    override fun onCreate(savedInstanceState: Bundle?) {
        super.onCreate(savedInstanceState)
        setContentView(R.layout.activity_main)
        slider=findViewById(R.id.seekBar)
        value=findViewById(R.id.value)
        slider.setOnSeekBarChangeListener(object : SeekBar.OnSeekBarChangeListener {
            override fun onProgressChanged(seekBar: SeekBar?, progress: Int, fromUser: Boolean) {
                value.text="Release your thumb to select .. "+progress.toString()
            }
            override fun onStartTrackingTouch(seekBar: SeekBar?) {
                value.text="Tracking Started ....." + slider.progress
            }
            override fun onStopTrackingTouch(seekBar: SeekBar?) {
                value.text="Thank you for selecting " + slider.progress
            }
        })
    }
}
```

Options:

- A) Result is the seekbar id.
- B) No any role for Result in this code.
- C) Result is the id of TextView widget which will show the result messages of SeekBar operation.
- D) Result is the maximum value of SeekBar steps that can be moved.

Answer:

C
