Question 1

Question Type: MultipleChoice

As a developer, you have created a Web API.

To execute the API, what is the minimum privilege the end user should have? (Choose the best answer.)

Options:

- A- Initiator
- B- Viewer
- C- Editor
- D- Administrator

Answer:

B

Question 2

Question Type: MultipleChoice

A lead designer receives this requirement:

Every time a record is modified, the data changed must be stored for audit.

Which design is the most efficient and has the least impact on the Appian application? (Choose the best answer.)

Options:

- A- Create a custom plugin that can write an audit trail to a log file.
- B- Create a trigger on the database table to capture the audit trail to a table.
- C- Create an Appian process to capture the change history and write the audit trail to the database.
- D- Create a web API call to an audit history system and write the audit trail to file.

Answer:

B

Question 3

Question Type: MultipleChoice

You are about to deploy a package to another environment.

Which two statements are true? (Choose two.)

Options:

- A- It is not possible to undo changes from an import to all types of objects.
- B- It is possible to undo changes from an import to all types of objects.
- C- It is possible to import the same package multiple times.
- D- It is not possible to import the same package multiple times.

Answer:

A, C

Question 4

Question Type: MultipleChoice

What is the lowest permission required on the data store in order to query, write, and delete data?

Options:

- A- Manager
- B- Administrator
- C- Viewer
- D- Editor

Answer:

C

Question 5

Question Type: MultipleChoice

You are creating an ERD that models the data for a college and includes a Many-to-Many relationship, Student-to-Class, where a student can be enrolled in multiple classes, and a class can enroll multiple students.

How can you handle this relationship so that it can be supported in Appian and remain in at least First Normal Form? (Choose the best answer.)

Options:

- A- A joining table can be used to hold instances of Student/Class relationships.
- B- The Student table should have a Class field to hold an array of Class IDs.
- C- The Class table should have a Student field to hold an array of Student IDs.
- D- It cannot be done, because Appian CDTs cannot handle Many-to Many relationships.

Answer:

A

Question 6

Question Type: MultipleChoice

Which two practices are strongly discouraged for activity chaining? (Select two.)

Options:

- A- Less than or equal to 5 seconds between attended activities.
- B- More than 50 node instances
- C- More than 5 seconds between attended activities
- D- Less than or equal to 50 node instances

Answer:

B, C

Question 7

Question Type: MultipleChoice

You need to build a process model that transforms a large data set.

Which two things should you ensure to include in your process model? (Choose two.)

Options:

- A- A subprocess is called using "Multiple Node Instances (MNI)" to perform the transformation on each item in the data set.
- B- An XOR gateway is added before the transformation node, to check for empty/null values.
- C- A loop is created within the process model that increments on each iteration, updating that particular row in the data set.
- D- The transformation is applied with an expression rule that takes the data set as an input, and loops through the dataset using a looping function, such as foreach.

Answer:

B, D

Question 8

Question Type: MultipleChoice

You want to generate an email body which varies from one Appian environment to another. For instance, between DEV and TEST.

Based on Appian best practices, how should you define the environment name? (Choose the best answer.)

Options:

- A- Create an expression rule and update its value post-deployment.
- B- Create an environment-specific constant.
- C- Create a constant and update its value post-deployment.
- D- Create a stored procedure.

Answer:

B

Question 9

Question Type: MultipleChoice

You need to insert the deleted row of a table into a history table for audit purposes.

What is the most efficient method to achieve this?

Options:

- A- Materialized view
- B- Process model
- C- View
- D- Trigger

Answer:

D
