Question 1

Question Type: MultipleChoice

Performance testing on Software-as-a-Service (SaaS) implementations is almost always carried out with a white box testing approach that does not involve the use of automated testing software.

Select the correct answer.

Options:

A- True

B- False

Answer:

B

Question 2

Question Type: MultipleChoice

Which of the following characteristics of cloud-based IT resources can be measured with Infrastructure-as-a-Service (IaaS) and Platform-as-a-Service (PaaS) implementations?

SELECT ALL THAT APPLY

Options:

A- availability

B- confidentiality

C- reliability

D- performance

Answer:

A, C, D

Question 3

Question Type: MultipleChoice

Which of the following characteristics of cloud-based IT resources are difficult to fully test on Software-as-a-Service (SaaS) implementations?

SELECT ALL THAT APPLY

Options:

A- availability

B- confidentiality

C- reliability

D- performance

Answer:

A, C

Question 4

Question Type: MultipleChoice

White box testing is commonly used with which of the following cloud delivery models?

SELECT ALL THAT APPLY

Options:

- A- Infrastructure-as-a-Service (IaaS)
- B- Platform-as-a-Service (PaaS)
- C- Software-as-a-Service (SaaS)
- D- Replicated Software-as-a-Service (SaaS)

Answer:

A

Question 5

Question Type: MultipleChoice

Which of the following are primary areas of testing a cloud service in relation to information published in its service level agreement?

Select the correct answer.

Options:

A- availability

B- reliability

C- performance

D- All of the above.

Answer:

D

Question 6

Question Type: MultipleChoice

We are building a new service composition comprised of two on-premise services and two cloud services. What type of testing should we perform in order to ensure specifically that the on-premise and cloud-based services can interact as required?

Select the correct answer.

Options:

- A- virtual testing
- B- integration testing
- C- stability testing
- D- regression testing

Answer:

B

Question 7

Question Type: MultipleChoice

Which of the following types of testing are directly associated with testing the speed, responsiveness, stability and/or reliability of cloud-based IT resources?

SELECT ALL THAT APPLY

Options:

- A- virtual testing

B- performance testing

C- stress testing

D- regression testing

Answer:

B

Question 8

Question Type: MultipleChoice

Because non-relational cloud storage avoids the processing overhead that can be imposed by relational databases, it can be more scalable.

Select the correct answer.

Options:

A- True

B- False

Answer:

A

Question 9

Question Type: MultipleChoice

Non-relational cloud storage is identical to traditional relational storage, except that it exists as a database hosted in a cloud environment instead of an on-premise environment. It is referred to as "non-relational" because the database is no longer able to form relationships with on-premise databases. As a result, two-phase commit transactions across cloud and on-premise environments are no longer possible.

Select the correct answer.

Options:

A- True

B- False

Answer:

B

Question 10

Question Type: MultipleChoice

With cloud storage, consumers only pay for the actual storage they use.

Select the correct answer.

Options:

A- True

B- False

Answer:

A

Question 11

Question Type: MultipleChoice

Which of the following are data storage levels used by cloud-based storage mechanisms?

Select the correct answer.

Options:

A- dataset

B- files

C- block

D- All of the above.

Answer:

D
