Question 1

Question Type: MultipleChoice

Which of the following items might be contained in the service-level profile, as opposed to the capability-level profile?

Options:

- A- a description of the service capability
- B- a description of the service's overall purpose
- C- a service capability's input and output values
- D- details of a service capability's role within a service composition

Answer:

B

Question 2

Question Type: MultipleChoice

Which accurately describe the relationship between a service profile and a service registry record?

Options:

- A-** Service registry record is the name used to distinguish a service profile once its associated service is deployed.
- B-** The service profile and the service registry record are always the same document.
- C-** Service profiles and service registry records can contain similar types of information. However, their formats are often different because the service registry record format is usually dependent upon the specific service registry product being used.
- D-** A service registry record often contains a subset of the information found in a service profile due to the application of the Service Abstraction principle.

Answer:

C, D

Question 3

Question Type: MultipleChoice

Following the completion of the service development and service testing lifecycle phases for a new service, the _____ and _____ can become part of the service profile.

Options:

- A- technical service contract, service accessory
- B- service level agreement, service accessory
- C- service registry record, service accessory
- D- None of the above.

Answer:

D

Question 4
