Question 1

Question Type: MultipleChoice

The application of the Rules Centralization pattern achieves the _____ of business rules data within an inventory, but it also _____ business logic associated with business-centric services.

Options:

A- centralization, centralizes

B- decentralization, centralizes

C- decentralization, decentralizes

D- centralization, decentralizes

Answer:

D

Question 2

Question Type: MultipleChoice

When applying the Policy Centralization pattern, if you create a global policy that conflicts with a service-specific policy that you already had in place, then:

Options:

A- you did not correctly apply the Policy Centralization pattern, because it guarantees policy conflict resolution

B- you need to apply the Intermediate Routing pattern in order to allow messages to avoid one or the other policy

C- you need to apply the Decoupled Contract pattern in order to separate the conflicting policy definitions

D- None of the above.

Answer:

D

Question 3

Question Type: MultipleChoice

Which of the following is a common problem associated with the application of the Policy Centralization pattern?

Options:

A- Changes to a shared policy definition can affect all services that rely upon it, which in turn, can affect all service consumers that have formed dependencies on the corresponding service contracts.

B- Changes to a shared data model can affect all services that rely upon it, which in turn, can affect all service consumers that have formed dependencies on the corresponding service contracts.

C- Changes to a shared database can affect all services that rely upon it, which in turn, can affect all service consumers that have formed dependencies on the corresponding service contracts.

D- None of the above.

Answer:

A

Question 4

Question Type: MultipleChoice

Which of the following statements about the application of the Policy Centralization pattern is true?

Options:

A- Service agents can check for policy compliance at runtime.

B- A policy framework that supports both the definition of policies and their consistent runtime enforcement is essential to meeting the goals of the Policy Centralization pattern.

C- Enterprise service bus products sometimes use proprietary policy formats which can lead to vendor lock-in and incompatibilities with other enterprise service bus products.

D- All of these statements are true.

Answer:

D

Question 5

Question Type: MultipleChoice

When applying the Schema Centralization pattern, multiple services can form dependencies on the same centralized schema.

Options:

A- True

B- False

Answer:

A

Question 6

Question Type: MultipleChoice

Which of the following statements about the Schema Centralization pattern does not make sense?

Options:

A- Up-front analysis effort is required to establish a schema layer independent of and in support of the service layer.

B- Schemas can be designed and implemented independently from the service capabilities that utilize them.

C- Multiple technical service contracts can make reference to a single schema.

D- Services in the same service inventory cannot share the same schemas.

Answer:

D
