## Question 1

---

**Question Type:** MultipleChoice

---

A service inventory architecture is designed to accommodate the composition and recomposition of services.

**Options:**

---

**A-** True

**B-** False

**Answer:**

---

A

## Question 2

---

**Question Type:** MultipleChoice

---

The scope and size of different service inventory architectures can vary.

**Options:**

---

**A-** True

**B-** False

**Answer:**

---

A

## Question 3

---

**Question Type:** MultipleChoice

---

Each service composition within a service inventory shares the same service composition architecture.

**Options:**

---

**A-** True

**B-** False

**Answer:**

---

B

## Question 4

---

**Question Type:** MultipleChoice

---

Which of the following statements regarding the application of the State Repository pattern is false?

**Options:**

---

- A-** State data can be temporarily written to and then later retrieved from a dedicated state repository.
- B-** Caching large amounts of state data in memory negatively impacts scalability.
- C-** A state repository is not useful for supporting long-running service activities.
- D-** Database technology is typically used for the implementation of a state repository.

**Answer:**

---

C

## Question 5

---

**Question Type: MultipleChoice**

---

The application of the Legacy Wrapper pattern typically results in:

**Options:**

---

- A-** no coupling of the wrapper service logic to the legacy system
- B-** no coupling of the wrapper service logic to the service contract
- C-** no coupling of the service consumer to the legacy system encapsulated by the wrapper service
- D-** no coupling of the service logic to the service contract

**Answer:**

---

C

## Question 6

---

**Question Type: MultipleChoice**

---

Which of the following statements is true?

### Options:

---

- A-** The application of the Legacy Wrapper pattern results in the coupling of the service consumer to the legacy resources encapsulated by the service.
- B-** The application of the Legacy Wrapper pattern results in the coupling of the service contract to the legacy resources encapsulated by the service.
- C-** The application of the Legacy Wrapper pattern supports the Contract Centralization pattern by helping to establish a standardized contract through which to access legacy resources.
- D-** None of these statements are true.

### Answer:

---

C
