Question 8

Question Type: MultipleChoice

The aircrew of a national air defence force has requested changes to the existing aviation software that provides on-board information about the combat environment. The air force is currently engaged in a peace-keeping mission in another country and has come under unexpected threats. The development life cycle is the V model. The software house needs to change their test management process to ensure delivery at the right time and quality. The software changes are coming in as the aircrew request them, as a result of their engagements with hostile forces. The aircrew have requested that the changes are made as quickly as possible. The project manager has decided to revisit the test management process. The changes will come as small change requests. The team have worked on the project for over 25 years, with little staff turnover. Which of the following test measures should be emphasised during the crisis?

- I . Readiness of the test environment for each run.
- II . Number of high-priority defects being found.
- III . Number of defects being found per tester.
- IV . Number of hours overtime being worked by staff.
- V . Number of change requests tested versus number passed.

Options:

- A)** I, II and V
- B)** II, III and IV
- C)** II, III and V
- D)** I, II and III

Answer:

A
