Question 1

Question Type: MultipleChoice

Arun sees two filters that show issues from a particular Jira Software project.

Yesterday, he received two filter subscriptions based on those two filters.

This morning, he can still see all the issues on his agile board, but he only received one of the filter subscriptions.

Identify a possible cause.

Options:

A- His account was deactivated.
B- His account was suspended.
C- A group was deleted.
D- His product access was revoked.
E- A product role was deleted.

Answer:

C

Explanation:

If a group that was used to share a filter or a dashboard was deleted, the users who belonged to that group would no longer receive the filter subscriptions or see the dashboard .

[Manage shared filters and dashboards]

[Manage users, groups, permissions, and roles in Jira Cloud]

Question 2

Question Type: MultipleChoice

Holly just signed up for a new Confluence Cloud site.

What was definitely created along with the site?

Options:

A- two products
B- two user accounts
C- two approved domains
D- two groups
E- two sandboxes

Answer:

D

Explanation:

When Holly signed up for a new Confluence Cloud site, two groups were definitely created along with the site. These are the default groups for Confluence: confluence-users and site-admins. The confluence-users group grants access to Confluence and allows users to create and edit pages.The site-admins group grants administrative privileges for Confluence and allows users to manage global settings, templates, permissions, and more12

Reference=Manage product access,Manage groups

Question 3

Question Type: MultipleChoice

Your site currently only has Confluence and product access is granted to these 3 groups, among others:

. confluence-users

. confluence-admins

. site-admins

You have just added the Jira Software product to the site and are configuring its product access.

Which action is NOT possible?

Options:

A- Grant 'site-admins' the Product admin role for Jira Administration.
B- Make 'site-admins' a default group for Jira Software.
C- Grant 'confluence-admins' the Product admin role for Jira Administration.

D- Make 'confluence-admins' a default group for Jira Software.
E- Make 'confluence-users' a default group for Jira Software.

Answer:

C

Explanation:

The Product admin role for Jira Administration is only available for groups that have access to Jira Software1. The ''confluence-admins'' group does not have access to Jira Software by default, so you cannot grant them this role.You can only grant this role to groups that have the Jira Software User role or the Jira Software Admin role2.

Manage groups

Manage product roles

Question 4

Question Type: MultipleChoice

Bob only needs to update project schemes in your Jira site.

He should not have too much access or use a license if it is not necessary.

Which product access configuration is correct?

Product	Product roles
Jira Administration	Product admin

Product	Product roles
Jira Software	User

Product	Product roles
Jira Software	Product admin, User

Product	Product roles
Jira Software	User
Jira Administration	Product admin

Options:

A- Option A
B- Option B
C- Option C
D- Option D

Answer:

D

Explanation:

The correct product access configuration for Bob is Jira Administration with Product admin role and Jira Software with User role. This will allow Bob to update project schemes in Jira Software, as well as other project settings, without using a license. The Product admin role for Jira Administration grants access to the Jira Administration product, which is a separate product from Jira Software that does not consume a license.The User role for Jira Software grants access to the Jira Software product, which does consume a license, but is necessary for Bob to view and edit project schemes12

Question 5

Question Type: MultipleChoice

Five users performed the following tasks:

Anne	Created an API token.
Bob	Revoked Anne's API token.
Cindy	Created an API key.
Doug	Used the API key created by Cindy in an automation rule.
Emily	Revoked the API key created by Cindy.

How many of these users are definitely org admins?

Options:

A- 1 user
B- 2 users
C- 3 users

D- 4 users
E- 5 users

Answer:

A

Explanation:

Only Bob and Emily have performed tasks that are exclusive to org admins. However, Emily's task could have been performed by a site admin as well. Therefore, only Bob is definitely an org admin.

[Manage site-level permissions] and [Manage global permissions]

Question 6

Question Type: MultipleChoice

Martha needs to be able to use and update global templates and blueprints.

Which product access configuration is correct for Martha?

Product	Product roles
Confluence	User, Product admin

Product	Product roles
Jira	User, Product admin

Product	Product roles
Jira Administration	Product admin
Confluence Administration	Product admin

Product	Product roles
Confluence	User
Confluence Administration	Product admin

Product	Product roles
Jira Software	User
Jira Administration	Product admin

Options:

A- Option A
B- Option B
C- Option C
D- Option D
E- Option E

Answer:

D

Explanation:

Martha needs to be able to use and update global templates and blueprints. The correct product access configuration for Martha is Confluence Administration with Product admin role. This role allows her to manage global templates and blueprints, as well as other site-wide settings for Confluence. She also needs the User role for Confluence to access and edit pages.

Reference=Manage product access,Administer global templates

Question 7

Question Type: MultipleChoice

Previously, your company had two Cloud organizations as shown.

Organization	Products
Original	Jira Software, Confluence
Destination	Jira Software

Just now, all products from Original were transferred to Destination. Afterward, Original was deleted.

How does Jira Software appear on the Overview page of the Destination organization?

Options:

A- as two products under the Destination URL only
B- as a single product under the Original URL
C- as a single product under the Destination URL
D- as two products under the Original URL and Destination URL

Answer:

C

Explanation:

After the products from Original were transferred to Destination, Jira Software will appear as a single product under the Destination URL. This is because the Original organization was deleted, so there is no longer a separate URL for it.

How to prepare for ACP-520: Atlassian Cloud Organization Admin Certification, section ''Manage multiple sites and products''

Transfer products to another organization, subsection ''What happens after you transfer products?''

Question 8

Question Type: MultipleChoice

Your Cloud organization has multiple products on multiple sites.

Currently, Edmund is a brand new user with no product access.

You selected Edmund from Directory > Users, clicked "Add products", and set the User product role from the Product roles dropdown for a single product on

a single site. For all other products, the Product roles dropdown was None.

Which is NOT a possible outcome for Edmund?

Options:

A- He gains access to different products on multiple sites.
B- He is granted product admin privileges.
C- He gains access to the same product on multiple sites.
D- He gains access to a single product on a single site.
E- He gains access to multiple products on a single site.
F- He is granted org admin privileges.

Answer:

F

Explanation:

The only outcome that is not possible for Edmund is that he is granted org admin privileges. This is because org admin privileges are not related to product access or product roles, but to organization settings and management. To grant Edmund org admin privileges, you would need to go to Settings > Organization admins and add him there. The other outcomes are possible depending on the product access settings and the groups that Edmund belongs to.

Reference= [Give users access to products] and [Manage organization admins]

Question 9

Question Type: MultipleChoice

Alpha Corp. recently acquired one of its competitors, Beta Corp.

Each company had its own Atlassian Cloud organization.

You would like to manage users and groups from both corporations in a single location.

Identify the correct feature to use.

Options:

A- Organization insights
B- Release tracks
C- Verify domains
D- Transfer products
E- Identity providers

Answer:

D

Explanation:

If you want to manage users and groups from both corporations in a single location, you need to consolidate your Atlassian Cloud organizations. This can be done by transferring all product instances in one organization to another.After the transfer, the unwanted organization is deleted1.This feature is called Transfer products and it is available from the organization settings2.

The other options are not features that can help you merge your organizations.Organization insights is a feature that provides analytics and reports on your organization's users, products, and security3.Release tracks is a feature that allows you to choose when your cloud products receive new features and improvements4.Verify domains is a feature that allows you to manage the Atlassian accounts of your users and apply security policies to them5.Identity providers is a feature that allows you to integrate your organization with external identity services, such as SAML or SCIM6.

Should I merge my Atlassian organizations?

Transfer all products to another organization

View organization insights

Choose a release track for your cloud products

Verify a domain to manage accounts

Manage users from your identity provider
