Question 1

Question Type: MultipleChoice

A Blue Prism Process reads data about a customer from an online form which includes their date of birth. A Process must determine if the customer is under the age of 18 before processing the customer request.

What type of Blue Prism stage would you use to test the customer's age?

Options:

- A- Calculation stage
- B- Business Rule stage
- C- Validation stage
- D- Decision stage

Answer:

D

Explanation:

A decision stage is used to evaluate process rules or logic and branch the process flow based on the outcome of the evaluation. A decision stage can have multiple outcomes and can use expressions to compare values or check conditions. In this case, a decision stage can be used to compare the customer's date of birth with the current date and determine if they are under 18 or not. Question 2

Question Type: MultipleChoice

When working with the orders area of the Centrix Data Solutions order system, there is a requirement to enter an order menu option in the field located above the Go button:

Please enter an option

1. New Order
2. Retrieve Order
3. View All Orders
4. View Orders By Date

The menu option field element in Application Modeller has been configured as follows:

Element Details

Name

Description

Element Type Data Type

Attributes

Name	Mat...	Match Type	Value
Window Text	<input checked="" type="checkbox"/>	= (Equal)	1
Visible	<input checked="" type="checkbox"/>	= (Equal)	True
Screen Visible	<input checked="" type="checkbox"/>	= (Equal)	True
Enabled	<input checked="" type="checkbox"/>	= (Equal)	True
Class Name	<input checked="" type="checkbox"/>	= (Equal)	WindowsForms10.EDIT

Which Attribute should be un-ticked to ensure the menu option field element can be consistently recognised?

Options:

- A- Window Text
- B- Visible
- C- Class Name
- D- Enabled
- E- Screen Visible

Answer:

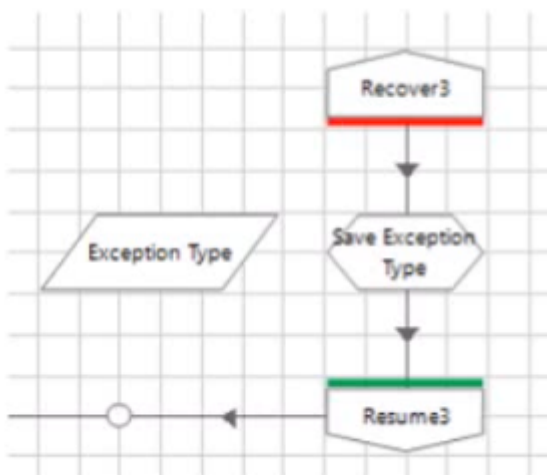

A

Explanation:

The Window Text attribute should be un-ticked because it contains the text "Orders" which may not be unique or consistent across different windows in the application. The other attributes are more reliable and stable for identifying the menu option field element. Question 3**Question Type:** MultipleChoice

Examine the following recover flow taken from a Blue Prism Process

The 'Exception Type' data item has no initial value and has a data type of text

The Calculation stage 'Save Exception Type' will output the current exception type to the 'Exception Type' data item.

What expression would you use in the 'Save Exception Type' stage to achieve this?

Options:

A- Current Exception Type

Answer:

A

Explanation:

This is the correct expression to use in the calculation stage to output the current exception type to the data item. It uses the built-in object CurrentException and its property Type to get the value of the exception type. Reference:

https://portal.blueprism.com/sites/default/files/2021-05/Blue%20Prism%20Certification%20-%20Associate%20Developer%20-%20Certification%20Overview_0.pdf (page 15)

Question 4

Question Type: MultipleChoice

Which of the following items can be used in Blue Prism to transmit values between Process Pages?

(Choose all items which apply)

Options:

- A- Input Parameters
- B- Lookup Stages
- C- Output Parameters
- D- Calculation Stages
- E- Data Items

Answer:

A, C, E

Explanation:

Input parameters, output parameters and data items can be used to transmit values between process pages by passing or returning values from one page to another². Lookup stages and calculation stages are not used for this purpose, as they are used to retrieve values from collections or perform calculations on values³.
