## Question 1

---

**Question Type:** MultipleChoice

---

What should be taken into account when considering the licensing of the Blue Prism environment? (select 3)

### Options:

---

- A- Blue Prism is licensed, based on the number of connections to the database
- B- The number of processes executing in the production environment(s) at the same time.
- C- The license implications of the software that will be automated by Blue Prism
- D- The licensing of the SQL Server environment
- E- The Blue Prism license includes everything that will be required for a production environment

### Answer:

---

B, C, D

## Question 2

---

**Question Type:** MultipleChoice

---

Which of the following dictates the suitability of a Runtime Resource to execute a process? (select 2)

**Options:**

---

- A-** Whether the Runtime Resource is online and appropriately connected to the relevant environment
- B.** The environment scheme (Inc. colour) configured for the environment
- C-** The clients and network access configured on the Runtime Resource
- D-** Whether the Runtime is a virtual device as processes cannot execute on physical devices

**Answer:**

---

A, C

## Question 3

---

**Question Type:** MultipleChoice

---

Which of the following statements is true, when considering the Virtualization of Blue Prism1? (select 2)

### Options:

---

- A- Type 1 hypervisors. such as VMWare Vsphere and Citrix XenServer should be used for production grade deployments of Blue Prism
- B- Type 2 hypervisors. such as Oracle Virtualbox and Vmware Workstation may be used for production grade deployments of Blue Prism
- C- All desktop virtualization strategies are suitable for deployment of Runtime Resources
- D- Consideration should be given to the system resource requirements of the automated applications, on top of the Blue Prism minimum specifications
- E- The Blue Prism minimum specifications should be sufficient for all use cases

### Answer:

---

A, D

## Question 4

---

### Question Type: MultipleChoice

---

Which components of the Blue Prism solution may be supported via Presentation / Session Virtualization Software (such as Microsoft RDSH session virtualization)? (select 1)

### Options:

---

- A- Runtime Resource
- B- Interactive Client (for Monitoring and Control)
- C- Interactive Client (for development)
- D- Application Server
- E- All of the above

**Answer:**

---

E

## Question 5

---

**Question Type:** MultipleChoice

---

Which of the following should be taken into account, when considering using a Virtual desktop for the Runtime Resource using Virtual Desktop Infrastructure (VDI) or Hosted Virtual Desktop (HVD) Software (such as Citrix XenDesktop or VMware Horizon View)? (select 2)

**Options:**

---

- A- When using a non-persistent Virtual Desktop, the image may be refreshed and this could be problematic if not carefully managed.

- B-** It may be necessary to use the Blue Prism login agent or another automatic login method, to instantiate the Virtual Desktop session
- C-** The Runtime Resources should not be deployed on Virtual Desktop Infrastructure
- D-** It is always appropriate to use the same technology and strategy as is used for the human operators in the client environment

**Answer:**

---

B, D

## Question 6

---

**Question Type: MultipleChoice**

---

What are the benefits of enabling direct network access from a Runtime to an end user application, as opposed to connecting via a component such as Citrix or RDSH? (select 2)

**Options:**

---

- A-** Network latency is circumvented
- B-** There are more options for interacting directly with the applications which accelerates time required to build automations
- C-** Automations built using direct object level instrumentation are likely to be more robust

- D- It is then possible to record an automation directly using the spying tools
- E- This enables the use of Surface Automation, which is faster to develop

**Answer:**

---

A, B

## Question 7

---

**Question Type: MultipleChoice**

---

What are appropriate methods for designing high availability and disaster recovery scenarios for the Blue Prism Database? (select 3)

**Options:**

---

- A- SQL Always on Availability Groups
- B- Windows Clustering
- C- Replication
- D- Blue Prism Active Sync
- E- Connect an application server to 2 Database Instances in parallel

**Answer:**

---

A, B, C

## Question 8

---

**Question Type:** MultipleChoice

---

What dictates whether it is appropriate to host Application Server services for different environments on a single device? (select 2)

**Options:**

---

- A-** Whether the different environments will be accessing the same processes
- B-** Whether there are any security related reasons to segregate services on to separate devices
- C-** Whether it is acceptable for product updates to be applied to all environments simultaneously
- D-** It is not possible to host multiple Application Server services on a single device

**Answer:**

---

B, C
