Question 1

Question Type: MultipleChoice

A vSAN administrator has an existing cluster where each ESXi host has the following:

Disk group #1 with one cache device and three capacity devices.

Disk group #2 with one cache device and two capacity devices.

What must the vSAN administrator do to expand disk group #2 to have three capacity devices?

Options:

- A- Create a new disk group with a single capacity device and then migrate the existing capacity devices
- B- Add the new capacity device to the disk group and vSAN will automatically rebalance
- C- Put the entire ESXi host in maintenance mode, evacuate all data, then add the new capacity device
- D- Put the disk group in maintenance mode, evacuate all data, then add the new capacity device

Answer:

B

Question 2

Question Type: MultipleChoice

A vSAN administrator was presented with 30 additional vSAN ReadyNodes to add to an existing vSAN cluster. There is only one administrator to complete this task.

What is the fastest approach?

Options:

- A- Run vim-cmd to capture, and apply the configuration from an existing host
- B- Launch Quickstart to Add Hosts to a vSAN Cluster
- C- Clone the ESXi boot partition to all new hosts, since the hardware is identical
- D- Use a Host Profile that was extracted from an existing host

Answer:

D

Question 3

Question Type: MultipleChoice

When adding a disk to a host that was previously used in a decommissioned vSAN cluster the intended disk does not show among the available devices in disk management.

Which action should be taken prior to assigning the disk on disk management?

Options:

- A- Format the existing partition
- B- Create a 1GB metadata partition
- C- Delete all device partitions
- D- Create a VMFS partition

Answer:

C

Question 4

Question Type: MultipleChoice

A host in a vSAN stretched cluster goes offline during an unplanned event.

Which action will be triggered from AQC on the vSAN cluster?

Options:

- A- AQC will trigger a vMotion of VMs that went offline.
- B- AQC will restart the VMs that went offline.
- C- AQC will recalculate the quorum on an object.
- D- AQC will create a vSAN alarm.

Answer:

C

Question 5

Question Type: MultipleChoice

A customer has deployed a new vSAN Cluster with the following configuration:

vSAN 8 is deployed with ESA.

VMs are configured with a RAID-5 VM policy.

During failure testing, before the new platform is placed into production one of the ESXi hosts is made unavailable.

Which RAID-5 data placement schemes will vSAN use with this failure condition?

Options:

- A-** vSAN can protect the platform using adaptive RAID 5 if the ESXi host fails to return
- B-** VMware HA will migrate the storage objects to another node in the cluster
- C-** Some VM data will be unavailable until the failed ESXi host is recovered
- D-** The data components on the hosts will be marked as degraded

Answer:

D

Question 6

Question Type: MultipleChoice

An administrator has to perform maintenance on one of the hosts in a three-node vSAN Cluster.

Which maintenance mode option will give the administrator the best availability for the VMs with the least effort and data transfer?

Options:

- A- Migrate all VMs and their storage from the host to a different storage system
- B- Full data migration
- C- Migrate all VMs and their storage from the host to a different vSphere cluster
- D- Ensure accessibility

Answer:

D

Question 7

Question Type: MultipleChoice

A vSAN administrator encounters a non-compliant virtual machine and the compliance status of some of its objects is noncompliant. vSAN is able to locate a full replica of 55% of the votes for the noncompliant objects.

What will vSAN do with the virtual machine?

Options:

- A-** Mark the virtual machine as compliant and automatically recover the noncompliant objects
- B-** Power off the virtual machine
- C-** Mark the virtual machine as inaccessible as vSAN is not able to locate more than 60% of the votes for the objects
- D-** Mark the virtual machine as orphaned

Answer:

A
