Question 1

Question Type: MultipleChoice

Which statement describes a feature of VMware HA?

Options:

A- It adds VPFM as a SNMP management server.

B- It detects host failures and starts applications on other hosts in the cluster.

C- It monitors the memory and CPU load on the host servers and balances them by moving VMs between the hosts.

D- It moves a running VM from one host to another.

Answer:

B

What does the IP address 10.1.1.1 represent?

Options:

A- The IP address of the EMC storage

B- The SMLT IP address of the two VSP 7200 switches

C- The Virtual IST IP address of the two VSP 7200 switches

D- The VRRP IP address of the two VSP 7200 switches

Answer:

D

Question 3

Question Type: MultipleChoice

When a Layer 2-only networking topology is deployed, what is the behavior of the ACP 4200?

Options:

A- It will support only a single management VLAN.

B- It will extend VLANs out to the Data Center routers which will provide Layer 3 routing.

C- It will support only a single application VLAN.

D- It will have 802.1Q tagging enabled on all ports of the VSP switches.

Answer:

B

Question 4

Question Type: **MultipleChoice**

The customer's networking team is considering connectivity options to the ACP 4200.

For which customers would an ACP 4200 Layer 2-only networking topology be deployed, and why?

Options:

A- Customers who have a Layer 2 Data Center. The ACP will provide Layer 3 routing for the customer.

B- Customers who wish to retain existing VLANs, subnets, and IP subnets. The ACP will extend VLANs out to the Data Center routers which will provide Layer 3 routing.

C- Customers who do not use Dynamic routing protocols. The ACP will use static routes for connectivity to the Data Center.

D- Customers who wish to upgrade their Data Center to Fabric Connect. The ACP will use Fabric Extend to integrate with the customer's Data Center switches.

Answer:

D

Question 5

Question Type: MultipleChoice

Why does enabling VMware Enhanced vMotion Compatibility (EVC) prevent vMotion migrations from falling?

Options:

A- Because of incompatible DRS rules across the cluster

B- Because of incompatible HA rules across the cluster

C- Because of insufficient memory across the cluster

D- Because of incompatible CPUs across the cluster

Answer:

D

Question 6

Question Type: **MultipleChoice**

Which two are valid levels of VMware performance monitoring? (Choose two.)

Options:

A- Visualization Performance and Fault Manager (VPFM)

B- Virtual Machine (VM)

C- Data Center (DC)

D- Host

Answer:

B, D

Question 7

Question Type: **MultipleChoice**

Refer to the exhibit.

Why is the usage measurement of CPU2 (in Purple) shown in the chart highlighted in the table?

Options:

A- Because the CPU2 has been nominated as the primary CPU in this Virtual Machine.

B- Because the CPU2 has been highlighted with an active alarm.

C- Because the CPU2 usage is closest to the average usage of all the CPUs.

D- Because the CPU2 has been selected in the table under the chart.

Answer:

D

Question 8

Question Type: MultipleChoice

Which statement about all hosts in the cluster describes a system requirement for VMware vMotion in ACP 4200?

Options:

A- They must be the same server type.

B- They must have matching Memory capacity.

C- They must have matching CPU types.

D- They must have matching VMware network settings.

Answer:

C

Question 9

Question Type: MultipleChoice

A customer experienced an outage of one of their Host servers in their ACP 4200 solution. Additionally, after the failure, all of the applications that were running on the failed host, did not recover to another host.

To verify the configuration, which third party management tool needs to be used?

Options:

A- SSH into the switches

B- Avaya Orchestrator

C- Nimble Storage web interface

D- vSphere Web Client

Answer:

D
