Question 1

Question Type: MultipleChoice

The application of the Multitenant Environment compound pattern results in a cloud architecture that enables a single physical server to host multiple virtual servers. Each virtual server can be provided to and configured independently by a different cloud consumer.

Options:

A- True

B- False

Answer:

B

Question 2

Question Type: MultipleChoice

The application of the Load Balanced Virtual Switches pattern can result in a system that uses link aggregation to balance network traffic.

Options:

A- True

B- False

Answer:

A

Question 3

Question Type: MultipleChoice

The application of the _____ pattern results in a dynamic vertical scaling system that uses the _____ program to move LUNs to cloud storage devices of higher capacity.

Options:

A- Cross-Storage Device Vertical Tiering, LUN migration

- B-** Intra-Storage Device Vertical Tiering, storage replication
- C-** Shared Resources, rapid provisioning
- D-** None of the above.

Answer:

A

Question 4

Question Type: MultipleChoice

The cloud architecture that is established by the application of the Storage Workload Management pattern can rely on the storage capacity monitor to: (Choose Two)

Options:

- A-** notify the storage capacity system whenever a cloud storage device is being over-utilized
- B-** migrate LUN5 to different cloud storage devices
- C-** detect when the workload of a cloud storage device has reached a pre-defined threshold

D- act as an external interlace to a cloud storage service

Answer:

A, C

Question 5

Question Type: MultipleChoice

The system resulting from the application of the Direct LUN Access pattern allows virtual servers to see LUN5 as directly accessible file-based storage.

Options:

A- True

B- False

Answer:

B

Question 6

Question Type: MultipleChoice

The Intra-Storage Device Vertical Tiering pattern is applied to resolve issues caused by:

Options:

- A- Multiple cloud storage devices that need to vertically scale at the same time
- B- Cloud consumers that are limited to using one cloud storage device to store multiple applications and services
- C- Different disk types across redundant cloud storage devices that use different storage methods
- D- Cloud consumers that have cloud storage devices in different geographical regions that need to be combined

Answer:

B

Question 7

Question Type: MultipleChoice

The Automated Administration pattern can be applied together with the Elastic Resource Capacity pattern, so that a hypervisor can be initiated by _____ to allocate more resources for a virtual server.

Options:

- A- a watchdog monitor
- B- a pay-per-use monitor
- C- an intelligent automation engine script
- D- an automatic scaling listener

Answer:

C
