Question 1

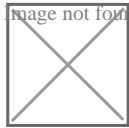

Question Type: MultipleChoice

A customer has an Azure Virtual Network named VNet1 that contains an internal standard SKU load balancer named LB1. The backend pool for LB1 includes the following virtual machines: VM1, VM2.

The customer configures a rule named Rule1 to load balance incoming HTTPS requests for VM1 and VM2. Rule1 is associated with an HTTPS health probe. The path for the probe is set to /.

The network adapters of VM1 and VM2 are associated with a network security named NSG1 that contains the following rules:

Image not found or type unknown

You need to resolve the issue.

What should you do?

Options:

- A) Change the health probe associated with Rule1 to use HTTP.
- B) Add an NSG1 rule with the source set to VirtualNetwork.

- C) Change the health probe associated with Rule1 to use TCP.
- D) Add an NSG1 rule with the source set to AzureLoadBalancer.

Answer:

A

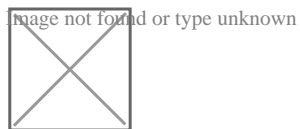

Question 2

Question Type: MultipleChoice

A customer has an Azure Virtual Network named VNet1 that contains an internal standard SKU load balancer named LB1. The backend pool for LB1 includes the following virtual machines: VM1, VM2.

The customer configures a rule named Rule1 to load balance incoming HTTPS requests for VM1 and VM2. Rule1 is associated with an HTTPS health probe. The path for the probe is set to /.

The network adapters of VM1 and VM2 are associated with a network security named NSG1 that contains the following rules:

You need to resolve the issue.

What should you do?

Options:

- A) Change the health probe associated with Rule1 to use HTTP.
- B) Add an NSG1 rule with the source set to VirtualNetwork.
- C) Change the health probe associated with Rule1 to use TCP.
- D) Add an NSG1 rule with the source set to AzureLoadBalancer.

Answer:

A
