## Question 1

---

**Question Type:** MultipleChoice

---

An organization is developing a new solution for hosting an external website. The systems administrator needs the ability to manage the OS. Which of the following methods would be MOST suitable to achieve this objective?

### Options:

---

- A- Deploy web servers into an IaaS provider.
- B- Implement a cloud-based VDI solution.
- C- Provision web servers in a container environment.
- D- Use PaaS components in the cloud to implement the product.

### Answer:

---

C

## Question 2

---

**Question Type:** MultipleChoice

---

A company needs a solution to find content in images. Which of the following technologies, when used in conjunction with cloud services, would facilitate the BEST solution?

**Options:**

---

- A- Internet of Things
- B- Digital transformation
- C- Artificial intelligence
- D- DNS over TLS

**Answer:**

---

C

## Question 3

---

**Question Type:** MultipleChoice

---

A company needs to access the cloud administration console using its corporate identity. Which of the following actions would MOST likely meet the requirements?

### Options:

---

- A- Implement SSH key-based authentication.
- B- Implement cloud authentication with local LDAP.
- C- Implement multifactor authentication.
- D- Implement client-based certificate authentication.

### Answer:

---

D

## Question 4

---

### Question Type: MultipleChoice

---

A company is currently running a website on site. However, because of a business requirement to reduce current RTO from 12 hours to one hour, and the RPO from one day to eight hours, the company is considering operating in a hybrid environment. The website uses mostly static files and a small relational database. Which of the following should the cloud architect implement to achieve the objective at the LOWEST cost possible?

### Options:

---

- A-** Implement a load-balanced environment in the cloud that is equivalent to the current on-premises setup and use DNS to shift the load from on premises to cloud.
- B-** Implement backups to cloud storage and infrastructure as code to provision the environment automatically when the on-premises site is down. Restore the data from the backups.
- C-** Implement a website replica in the cloud with auto-scaling using the smallest possible footprint. Use DNS to shift the load from on premises to the cloud.
- D-** Implement a CDN that caches all requests with a higher TTL and deploy the IaaS instances manually in case of disaster. Upload the backup on demand to the cloud to restore on the new instances.

**Answer:**

---

B

## Question 5

---

**Question Type:** MultipleChoice

---

Users of an enterprise application, which is configured to use SSO, are experiencing slow connection times. Which of the following should be done to troubleshoot the issue?

**Options:**

---

**A-** \* Perform a memory dump of the OS.

\* Analyze the memory dump.

\* Upgrade the host CPU to a higher clock speed CPU.

**B-** \* Perform a packet capture during authentication.

\* Validate the load-balancing configuration.

\* Analyze the network throughput of the load balancer.

**C-** \* Analyze the storage system IOPS.

\* Increase the storage system capacity.

\* Replace the storage system disks to SSD.

**D-** \* Evaluate the OS ACLs.

\* Upgrade the router firmware.

\* Increase the memory of the router.

**Answer:**

---

C

## Question 6

---

**Question Type:** MultipleChoice

---

Which of the following will provide a systems administrator with the MOST information about potential attacks on a cloud IaaS instance?

**Options:**

---

- A- Network flows
- B- FIM
- C- Software firewall
- D- HIDS

**Answer:**

---

A

## Question 7

---

**Question Type:** MultipleChoice

---

A systems administrator is configuring network management but is concerned about confidentiality. Which of the following should the administrator configure to address this concern?

**Options:**

---

**A-** SNMPv3

**B-** Community strings

**C-** IPSec tunnels

**D-** ACLs

**Answer:**

---

C
