Question 1

Question Type: MultipleChoice

Phone A has been successfully registered to the U1900 system. At some point, unplug the network cable. At this time, log in to the U1900 system to check the registration status of phone

Options:

- A- The following statement is wrong ()
- A- The registration status of phone A in the U1900 system may change immediately
- B- The registration status of phone A in the U1900 system may remain unchanged
- C- The registration status of phone A in the U1900 system may change after a period of time
- D- The registration status of phone A in the U1900 system is updated, only after the network cable of phone A is unplugged, the change occurs after half of the registration period of phone A has passed

Answer:

D

Question 2

Question Type: MultipleChoice

One MCU supports 24-port 1080P30. Which of the following conference scenarios can be supported through configuration? ()

Options:

- A- 24 1080P30 venues
- B- 12 1080P30 venues + 24 720P60 venues
- C- 6 1080P30 venues + 24 720P30 venues
- D- 12 1080P60 venues + 24 4CIF venues

Answer:

A, C

Question 3

Question Type: MultipleChoice

When the eSpace 7900 series phones are restored to factory settings, which of the following statements is correct is () multiple choice

Options:

- A- Restoring factory settings will reset all phone parameters to default values
- B- All information in contacts and call logs will be retained
- C- Signal tones, language packs and personalized wallpapers imported by users will be retained
- D- In the phone login interface, long press the home interface button to restore the factory settings

Answer:

A, D

Question 4

Question Type: MultipleChoice

The following description of the local regeneration function is wrong ()

Options:

- A- The central node and the local node are interconnected through SIP relay

- B-** The heartbeat mechanism between the central node and the local node monitors the operating status of the peer device
- C-** Under normal circumstances, the IP phone of the local node is registered at the central node
- D-** The POTS phone of the local node is registered on the local node

Answer:

B

Question 5

Question Type: MultipleChoice

A single Media board of VP9660 MCU can support up to () 1080P 30 ports?

Options:

- A-** 12
- B-** 36
- C-** 24
- D-** 8

Answer:

C

Question 6

Question Type: MultipleChoice

At which level are SIP retransmissions and timeouts handled? ()

Options:

A- Syntax and coding layer

B- Transaction layer

C- Transport layer

D- Transaction user layer

Answer:

B

Question 7

Question Type: MultipleChoice

Regarding the upgrade method of eSpace IP phones, which of the following statements is correct () Multiple choice

Options:

- A- Support unified upgrade on the U1900 series unified gateway web management interface
- B- Support automatic upgrade
- C- Support single upgrade on the eSight interface
- D- Support manual upgrade

Answer:

B, C, D

Question 8

Question Type: MultipleChoice

In video systems, image processing uses RGB color space. () Right or Wrong

Options:

A- Right

B- Wrong

Answer:

B

Question 9

Question Type: MultipleChoice

In the H.460 public and private network traversal networking, one SC is deployed in the internal network and one SC is deployed in the DMZ are

a. What are the benefits of this networking? () Multiple choice

Options:

- A- Reduce the firewall port configuration between the intranet and the DMZ zone
- B- The intranet SC assumes the H.460 Client to solve the problem that the intranet does not support H.460 terminal traversal between public and private networks
- C- Two SCs can backup each other
- D- Two SCs can achieve load sharing

Answer:

A, B, D

Question 10

Question Type: MultipleChoice

In the U1900+SC solution, if a conference reservation is made through SMC2.0 and a multi-party telephone terminal is called, the following statement is correct () multiple choice

Options:

- A-** After each IP phone terminal mixes on U1900, U1900 sends the mixed voice to MCU
- B-** Each IP phone terminal directly interacts with the MCU for media streaming
- C-** After each IP phone terminal completes the audio mixing on the U1900, it is sent to the MCU. If there is a video phone in the IP phone, its video media is directly sent to the MCU
- D-** If there is a PSTN phone in the conference held by the video conferencing system, the media stream of this PSTN phone must go through the U1900 system

Answer:

B, D

Question 11

Question Type: MultipleChoice

Which of the following SIP message header field parameter combinations can identify the uniqueness of the call? () Multiple choice

Options:

A- From

B- To

C- CSeq

D- Call-ID

Answer:

A, B, D
