Question 1

Question Type: MultipleChoice

DAV (Distributed Authoring and Versioning) can solve issues that the HTTP protocol can not such as? (multiple choice)

Options:

- A- Rewrite the protection
- B- Resource Management
- C- Document Properties
- D- document encryption

Answer:

A, B, C

Question 2

Question Type: MultipleChoice

Which of the following is correct about the Huawei storage Oceanstor V3 storage system?

Options:

- A-** One Ethernet port can be used to create multiple logical ports
- B-** If you type Ethernet ports A and B into VLAN 2, by default the port A and B data are in the same drift group
- C-** If binding port A and physical port B are added to the same VLAN, as long as one physical port in bonded port A fails, the service switches to Physical Port B
- D-** When IP Fallback mode is set to Manual, when the port fails to recover, the active port link is in normal status and lasts longer than 1 minute, the system can switch the service to the primary port

Answer:

C

Question 3

Question Type: MultipleChoice

Which of the following are correct regarding the Simpana backup software? (multiple choice)

Options:

- A-** data Reader: The flow of raw data read from the client, set in each client
- B-** Data streams: client to MediaAgent data transfer stream, set in the storage strategy
- C-** Device Streams: MediaAgent to storage Media data transfer stream, set in each sub-client
- D-** The value of Data Reader must be less than the value of Device Streams

Answer:

A, B, C

Question 4

Question Type: MultipleChoice

Which if the following is correct regarding the Huawei Oceanstor unified storage system multi-planar system design?

Options:

- A-** The service plane uses GE channels for data transmission

- B-** The service plane connects the host IO channel, disk IO channel and GE switch
- C-** Plane redundancy between each other, when the business plane fails, allowing the use of control plane transmission of business data
- D-** When the GE switching channel is faulty, the PCIe switching channel can be used as the backup data transmission channel

Answer:

D

Question 5

Question Type: MultipleChoice

Which documents must be read for an Oracle database normal start? (Multiple choice)

Options:

- A-** Parameter file
- B-** Control Documents
- C-** archive log file
- D-** Data files

Answer:

A, B, D

Question 6

Question Type: MultipleChoice

In the scenario of database protection, when the slave uses the virtual snapshot to verify LUN data consistency on the production end and the DR end and the disaster recovery end LUN database can not be started normally. Which of the following are the possible reasons for this? (multiple choice)

Options:

- A-** After a snapshot of the LUN of the redundancy site is created, the snapshot is not activated at the same time
- B-** Disaster recovery data stored in the Cache, not yet written to the hard disk
- C-** When creating a snapshot on the disaster recovery end LUN The production end is copying data to the disaster recovery end
- D-** The production end and disaster recovery end adopt the disaster recovery solution of incremental LUN copy. The incremental data is abnormally interrupted during the synchronization process and has not been recovered

Answer:

A, C, D

Question 7

Question Type: MultipleChoice

When using OceanStor V3, you need to mount the file system snapshot to access the snapshot data.

Options:

A- True

B- False

Answer:

B
