Question 1

Question Type: MultipleChoice

A system administrator needs to configure a virtual machine to

guarantee that it always gets the appropriate resource even if the host os

overloaded and overcommitted.

Which setting on the virtual machine does the administrator need to

configure?

Options:

A- vSphere High Availability Admission Control

B- CPU and Memory Shares to High

C- CPU and Memory Reservations

D- High Performance Power Policy

Answer:

C

Question 2

Question Type: MultipleChoice

Which vSphere component provides continuous availability for

mission-critical virtual machines so users experience no loss of data and

no interruption in service during a host failure?

Options:

A- vSphere Fault Tolerance

B- vSphere Replication

C- vSphere HA

D- vSphere vmotion

Answer:

A

Question 3

Question Type: MultipleChoice

Which vSphere feature mitigates common optimization challenges?

Options:

A- vSphere Trust Authority

B- vSphere High Availability

C- vSphere DRS

D- vSphere Fault Tolerance

Answer:

C

Question 4

Question Type: MultipleChoice

An operator needs to take a snapshot of a VM before an upgrade. The

application team needs the ability to restore the VM with a consistent

state of the guest file system while keeping the VM online.

How can the operator accomplish this task?

Options:

A- Right Click VM > Power > Power Off > Actins > Compatibility > Upgrade VM Compatibility > OK

B- Right click VM > Migrate > Change Compute resource > Select Host > Finish

C- Right click VM > Snapshots > Take Snapshot > Choose option to quiesce guest file system > OK

D- Power Off VM > right click VM > Snapshots > Take Snapshot > OK

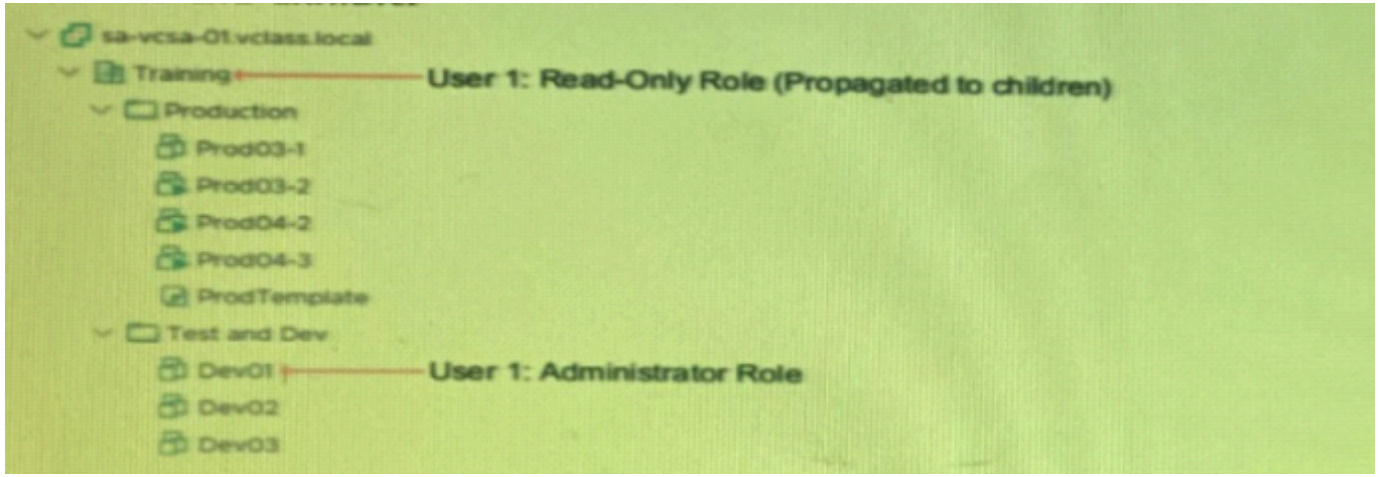
Answer:

C

Question 5

Question Type: MultipleChoice

Refer to the exhibit:



Which statement is true about the access privileges of User 1?

Options:

A- User 1 has read-only privileges to all objects in the Production folder.

B- User 1 has administrator privileges to all objects in the test and Dev folder.

C- User 1 has administrator privileges to all VMs in the Production

folder.

D- User 1 has read-only Privileges to the Dev02 VM in the test and Dev folder.

Answer:

B

Question 6

Question Type: MultipleChoice

An administrator wants to ensure that a copy of a virtual machine can

still power up on another data center during a disaster.

Which feature meets this requirement?

Options:

A- vSphere Replication

B- vMotion

C- vSphere High Availability

D- Fault Tolerance

Answer:

A

Question 7

Question Type: **MultipleChoice**

An administrator would like to enable a switch setting to restrict the

network bandwidth that is available to ports, but the solution must also

allow bursts of traffic to flow through at higher spends.

Which vSphere Distributed Switch setting accomplishes this goal?

Options:

A- Monitoring

B- teaming and failover

C- Traffic shaping

D- Security

Answer:

C

Question 8

Question Type: MultipleChoice

Which feature must be enabled to use vSphere Fault Tolerance?

Options:

A- vSphere DRS

B- vSphere Replication

C- vSphere HA

D- vSAN

Answer:

C

Question 9

Question Type: MultipleChoice

Which event type indicates a Fatal problem has occurred in the system, and the process or operation will be terminated?

Options:

A- Information

B- Audit

C- Error

D- Warning

Answer:

D
