- C- Clear the software bulletin that has been selected for installation for the selected operating system
- D- Remove the software update policy for the selected operating system

### Answer:

---

B

## Question 2

---

**Question Type: MultipleChoice**

---

An administrator purchased a server with 16 core processors, 4 local HDDz, and 32 GB of RAM. The administrator plans to install MSSQL Server locally on the NS. What is the maximum number of managed computers, according to Symantec best practice, that hardware will support?

**Options:**

---

**A-** 5000

**B-** 500

**C-** 10000

**D-** 1000

**Answer:**

---

A

## Question 3

---

**Question Type: MultipleChoice**

---

An administrator needs to reset student lab computers to a fresh state to prepare for the next group of students, when the computers are reset, the operating system is manually installed. The administrator then physically installs drivers and applications for each unique system one at a time with physical media. The process is inefficient and highly prone to error.

Which two (2) benefits would the organization realize by using Deployment Solution? (select two).

**Options:**

---

- A-** Automated installation of the operating system using a scripted OS installation wizard.
- B-** Automated installation of the drivers for each system using prepare the image tasks
- C-** Automated application installations through use of the software portal
- D-** Automated driver installation using DeployAnywhere
- E-** Automated installation of the operating system using PC Transport

**Answer:**

---

B, D

## Question 4

---

**Question Type: MultipleChoice**

---

An administrator must deploy software to a users computer to remedy a problem. The administrator is trying to determine whether to create a policy or a task to deploy the software to the users computers. In which two situations should the admin choose a policy instead of a task? (Select 2)

**Options:**

---

- A- When actions are recurring
- B- When actions are to be performed on a Schedule
- C- When actions are to be performance on only a few resources
- D- When actions are to be performed only once
- E- When actions needs to be performed in near-real time

**Answer:**

---

A, B

## Question 5

---

**Question Type:** MultipleChoice

---

An administrator is working in a distributed environment with 10,000 endpoints, 4 notification servers, and 16 site servers.

How many Microsoft SQL Server databases are needed in this environment?

**Options:**

---

A- 2

B- 4

C- 8

D- 1

**Answer:**

---

B

## Question 6

---

**Question Type: MultipleChoice**

---

An administrator is tasked with distributing an application as soon as possible to the traveling sales organization. The sales organization works remotely 100% of the time and does NOT log on to the network. Management on their computers is accomplished with an internet

gateway with an internet site server.

Which method is the quickest for distributing the application?

**Options:**

---

- A- Using a software delivery policy
- B- Using the software portal
- C- Using the software catalog
- D- Using the software update policy

**Answer:**

---

A

## Question 7

---

**Question Type: MultipleChoice**

---

An administrator is creating a policy to deliver a software application to an entire environment, but needs to prevent installation on computers that already have the software which option allows the installation of the software application only on computers that need the

software?

**Options:**

---

- A- The software detection rule
- B- The deployment plug-in configurations
- C- The software update staging rule
- D- The software applicability rule

**Answer:**

---

A

## Question 8

---

**Question Type: MultipleChoice**

---
