## Question 1

---

**Question Type:** MultipleChoice

---

Which of the following is NOT a viable option when implementing inter-AS VPRN?

### Options:

---

- A- An MP-eBGP session between route reflectors in different autonomous systems to exchange IPv4 routes.
- B- An MP-eBGP session between ASBRs to exchange labeled IPv4 routes.
- C- An eBGP session between ASBRs to exchange IPv4 routes.
- D- An MP-eBGP session between ASBRs to exchange VPN-IPv4 routes.

### Answer:

---

A

## Question 2

---

**Question Type:** MultipleChoice

---

Which of the following about inter-AS model B VPRN is TRUE?

**Options:**

---

- A-** Model B requires the configuration of back-to-back VRFs between the ASBRs in different autonomous systems.
- B-** Model B is highly scalable because the VPN-IPv4 routes are neither maintained, nor distributed by, the ASBRs.
- C-** There is a dependency between the route target used in different autonomous systems.
- D-** Model B supports the exchange of labeled IPv4 routes between ASBRs.

**Answer:**

---

D

## Question 3

---

**Question Type: MultipleChoice**

---

For the inter-AS model B VPRN, which of the following protocols is used to advertise routes between ASBR1 and ASBR2?

**Options:**

---

- A- iBGP
- B- eBGP
- C- MP-iBGP
- D- MP-eBGP

**Answer:**

---

D

## Question 4

---

**Question Type: MultipleChoice**

---

The headquarter sites of VPRN 10 and VPRN 20 are part of an extranet VPRN. Which route target(s) should be imported under the VPRN 10 service on router R1?

**Options:**

---

- A- target:65100:1 only

**B-** target:65100:1 and target:65100:2

**C-** target:65100:1 and target:65100:3

**D-** target:65100:1, target:65100:2, and target:65100:3

**Answer:**

---

D

## Question 5

---

**Question Type:** MultipleChoice

---

Which of the following statements is FALSE when providing Internet access using route leaking between a VRF and the global routing table?

**Options:**

---

**A-** It is best used when a single VPN is required to provide Internet access, as well as to maintain VPN connectivity between different customer sites.

**B-** If there is no requirement for the VRF to contain the full Internet routing table, a default route to the Internet gateway router is sufficient.

- C-** Only one interface on the CE is required for both VPN and Internet connectivity.
- D-** The Nokia 7750 SR supports route leaking in full mesh and extranet VPRN topologies only.

**Answer:**

---

D

## Question 6

---

**Question Type: MultipleChoice**

---

To enable full spoke-to-spoke connectivity for the CE hub and spoke VPRN, on which router(s) should the displayed static-route be configured?

**Options:**

---

- A-** PE1
- B-** CE1
- C-** PE2 and PE3
- D-** CE2 and CE3

**Answer:**

---

C

## Question 7

---

**Question Type:** MultipleChoice

---

For a Carrier Supporting Carrier (CSC) VPRN where the customer carrier is a BGP/MPLS VPN service provider, which of the following is TRUE?

**Options:**

---

- A-** The customer carrier network can be a pure IP network.
- B-** The customer carrier can provide Layer 2 and Layer 3 services to its end-customers.
- C-** If the customer carrier offers VPRN services, PE routers residing in different customer carrier sites must run iBGP between them to exchange IPv4 routes.
- D-** If the customer carrier offers VPRN services, the network provider stores the end-customer routes in its CSC VPRN.

**Answer:**

---

B

## Question 8

---

**Question Type:** MultipleChoice

---

Which of the following statements about the control plane in Carrier Supporting Carrier (CSC) VPRN is FALSE?

### Options:

---

- A- The customer carrier does not learn any network provider routes.
- B- The network provider must learn the customer carrier PE and CE system addresses.
- C- Routes exchanged between CSC-CE and CSC-PE are labeled.
- D- The customer carrier PE system addresses are populated in the CSC VRF.

### Answer:

---

B
