Question 1

What does a Composite Provider allow you to do in SAP BW/4HANA? Note: There are 3 correct Answers to this question.

Options:

A- Combine Infoprovider using Join and Unions

B- Join two ABAP CDS views

C- Define new restricted key figures

D- Create new calculated fields Integrate

E- SAP HANA HDI calculation views.

Answer:

A, C, E

Explanation:

* A. Combine InfoProviders using Join and Unions: This is what a Composite Provider allows you to do in SAP BW/4HANA. A Composite Provider is an InfoProvider that combines data from several analytic indexes or from other InfoProviders (by union or inner join or left outer join), and makes this data available for reporting and analysis. Storing the data in BW Accelerator or in an SAP HANA database also ensures faster access to data in the query12.

* C. Define new restricted key figures: This is what a Composite Provider allows you to do in SAP BW/4HANA. A Composite Provider can define new restricted key figures based on the existing key figures of the underlying InfoProviders. Restricted key figures are key figures that are restricted by one or more characteristics13.

* E. Integrate SAP HANA HDI calculation views: This is what a Composite Provider allows you to do in SAP BW/4HANA. A Composite Provider can integrate SAP HANA HDI calculation views as part of its data sources, using a virtual table or an external SAP HANA view. This can enable mixed modeling scenarios that leverage both SAP BW/4HANA and SAP HANA capabilities14.

Question 2

Question Type: MultipleChoice

What is required before you can integrate an HDI Calculation View (data category Dimension) into another HDI Calculation View (data category Cube with Star Join) of the same HDI container?"

Options:

A- Create a synonym for the HDI Calculation View (data category Dimension).
B- Build the design time file of the HDI Calculation View (data category Dimension) to generate a runtime object.
C- Create a synonym for the HDI Calculation View (data category with Star Join).
D- Build the runtime object of the HDI Calculation View (data category Cube with Star Join) to generate a design time file.

Answer:

B

Question 3

Question Type: MultipleChoice

"How does SAP position SAP Data Warehouse Cloud in supporting business users?"

Options:

A- Business users can maintain process chains from SAP BW/4HANA dataflows
B- Business users can create agile models from different sources
C- Business users can allocate system resources without IT involvement

D- Business users can generate SQL code that is pushed to SAP BW/4HANA.

Answer:

B

Explanation:

SAP Data Warehouse Cloud is a cloud-based data service that enables business users to create agile models from different sources and access data in real time. Business users can use the graphical user interface or the SQL editor to create data models, join data from various sources, and enrich data with business semantics. Business users can also use SAP Analytics Cloud to visualize and analyze data from SAP Data Warehouse Cloud. SAP Data Warehouse Cloud supports business users by providing self-service capabilities, pre-built business content, and flexible consumption options. Reference: 123

Question 4

Question Type: MultipleChoice

Which features of an SAP BW/4HANA InfoObjet are intended to reduce the physical data volume? Note; There are 2 correct answers to this question.

Options:

A- Reference charateristic
B- Transitive attribute
C- Compounding charateristic
D- Enhanced master data update

Answer:

A, B

Question 5

Question Type: MultipleChoice

Which layer of the layered scalable architecture (LSA++) of SAP BW/4HANA is designed as the main storage for harmonized consistent data?

Options:

A- Open operational data store layer

B- Data acquisition layer

C- Virtual data mart layer

D- Flexible Enterprise Data Warehouse Core layer.

Answer:

D

Explanation:

* D. Flexible Enterprise Data Warehouse Core layer: This is the layer of the layered scalable architecture (LSA++) of SAP BW/4HANA that is designed as the main storage for harmonized consistent data. The Flexible Enterprise Data Warehouse Core layer contains the Corporate Memory and the Quality & Harmonization layers, which are used to store and harmonize data from different sources and systems. The data in this layer is modeled using DataStore objects (advanced) and InfoObjects, and can be accessed by different data marts for reporting and analysis purposes12.

Question 6

Question Type: MultipleChoice

Using SAP HANA as modeling focus, you want to combine data from different sources. Which techniques can you use? Note: There are 2 correct answers to this question.

Options:

A- BAPIs (Business Application Programming Inetrface)

B- Calculation views

C- AMDPs (ABAP Manged Database Procedures)

D- Stored procedures

Answer:

B, D

Question 7

Question Type: MultipleChoice

You want to set up the replication process for the SAP Landscape Transformation Replication Server. Which actions can you define for a specific table? Note: There are 2 correct answers to this question.

Options:

A- Apply mapping rules during the replication

B- Set the reading type and portion sizes

C- Change or enrich the table structure

D- Convert Unicode to non-Unicode

E- Apply customizing settings to the database redo logs.

Answer:

A, B

Question 8

Question Type: MultipleChoice

You created an Open ODS view of type Facts. Which object type can you associate with a view field in the characteristics folder? Note: There are 2 correct answers to this question.

Options:

A- Open ODS view of type Facts

B- Calculation View of type Dimension

C- Open ODS view of type Master Data

D- InfoObjetc of type Characteristic

Answer:

C, D

Question 9

Question Type: MultipleChoice

Which interface do you use to create a BW InfoObjet with access type "SAP HANA view!?

Options:

A- BW moedling perspective in SAP HANA studio

B- SAP HANA modeler perspective in SAP HANA studio

C- Embedded SAP GUI in SAP HANA studio

D- SAP Web IDE for SAP HANA

Answer:

A

Question 10

Question Type: MultipleChoice

Which objetcs can be affected by the key date in a BW query? Note: There are 3 correct answers to this question.

Options:

A- Navigation attributes

B- Hierachies

C- Key figures

D- Conditions

E- Display attributes

Answer:

A, B, E
