# Question 1

---

## Question Type: MultipleChoice

---

You are a cloud architect responsible for designing a multiple availability zone configuration for the organization's geographically dispersed clouds. You must provide the ability for services to survive a failure at the data center or site level. The primary requirement is to provide for automated site recovery.

What is a key consideration for automating the setup, failover, and recovery of services at the remote site?

### Options:

---

- A-** When implementing automated site recovery, you must have automated orchestration of site failback processes
- B-** The number of storage volumes in the DR site must be identical in number and size to the primary site.
- C-** The recovery site must have sufficient available capacity to host workloads after a disaster at the primary site.
- D-** The DR site must contain the same vendor hardware as the primary site.

### Answer:

---

C

## Question 2

---

**Question Type:** MultipleChoice

---

An organization wants to deploy a CMP solution for their private cloud environment. What is required for the CMP to work effectively?

**Options:**

---

- A- Programmable infrastructure
- B- Virtual firewall
- C- Commodity hardware
- D- Virtual router

**Answer:**

---

A

## Question 3

---

**Question Type: MultipleChoice**

---

Which design consideration applies to object storage?

**Options:**

---

- A- Multi-tenancy is supported through file and directory permissions
- B- It is best suited for high performance and low latency applications
- C- A RAID controller on the host computer handles redundancy
- D- A common authentication mechanism is accessible by all tenants

**Answer:**

---

B

## Question 4

---

**Question Type: MultipleChoice**

---

An organization wants to deploy cloud applications using block storage. The architect has included a HCI

solution in the cloud design. Which requirements must have led to including this solution in the design?

**Options:**

---

**A-** Acquire additional storage array

Combine storage and application processing using a spine/leaf topology

**B-** No additional storage arrays to be acquired

Separate storage processing from application processing

**C-** No additional storage arrays to be acquired

Combine storage and application processing on each node

**D-** Acquire additional storage array

Combine storage and application processing using a full mesh topology

**Answer:**

---

A

## Question 5

---

**Question Type: MultipleChoice**

---

A company has the following requirements:

Infrastructure with a designated SAN

Run applications on pre-integrated hardware components

Workloads are Platform 2.0 applications

Which solution would meet these requirements?

**Options:**

---

**A-** Traditional Infrastructure

**B-** Cloud-in-a-Box Infrastructure

**C-** Converged Infrastructure

**D-** Hyper-Converged Infrastructure

**Answer:**

---

D

## Question 6

---

**Question Type: MultipleChoice**

---

What is the key factor used in Business Value Analysis?

**Options:**

---

**A-** CAGR

**B-** TCO

**C-** CAPEX

**D-** NPV

**Answer:**

---

B
