Question 1

Question Type: MultipleChoice

Which of the following configurations can accept a VLAN pool?(Choose two)

Options:

- A- Trunk native VLAN
- B- Virtual AP profile
- C- User Role
- D- Server derived role
- E- FW Policies

Answer:

B, C

Question 2

Question Type: MultipleChoice

How does an Aruba infrastructure calculate a wireless device's location?

Options:

- A- GPS
- B- RF Fingerprinting
- C- RSSI triangulation
- D- TDOA
- E- LBS

Answer:

C

Question 3

Question Type: MultipleChoice

A company purchased an indoor mesh deployment using the 7005 controller and the AP 115 models, where 5 APs will be deployed on a floor to provide wireless internet access for users. Users may open VPN tunnels using software clients over the wireless network to a 3rd

party VPN concentrator overseas. The company wants to limit wireless user access to TCP traffic locally and VPN traffic overseas.

In addition to the base AOS, which licenses will be necessary for this deployment?

Options:

- A- VPN, PEF-NG
- B- AP Capacity, PEF-NG
- C- AP Capacity, PEF-NG, VPN
- D- AP Capacity
- E- PEF-NG, PEF-V

Answer:

B

Question 4

Question Type: MultipleChoice

What is the purpose of Mesh Clusters?

Options:

- A- To separate Mesh points from Mesh Portals.
- B- To ensure that mesh APs with the same VAPs are not in the same cluster.
- C- To define a group of mesh APs that create mesh links with each other.
- D- To cluster mesh APs of the same model together.
- E- To enable mesh APs to join the nearest mesh portal cluster.

Answer:

C

Question 5

Question Type: MultipleChoice

A Remote AP was properly functioning before losing its internet connection and now cannot communicate with the controller. What SSID is the AP broadcasting?

Options:

- A- The SSID in Operational mode Always and Forwarding mode Backup
- B- The SSID in Operational mode Split Tunnel and Forwarding mode Bridge
- C- The SSID in Operational mode Always and Forwarding mode Tunnel
- D- The SSID in Operational mode Standard and Forwarding mode Tunnel
- E- The SSID in Operational mode Persistent and Forwarding mode Bridge

Answer:

E

Question 6

Question Type: MultipleChoice

A Remote AP provisioned in "Split-Tunnel" Forwarding mode has which characteristic?

Options:

- A- Local traffic first goes to the controller and is then spilt back to the local network.
- B- Traffic is IPSec encrypted before it is sent to the controller.
- C- The user role must have a 'Permit' statement in order to locally bridge the traffic.
- D- The user role must have a 'route dst-nat' statement to locally bridge the traffic.
- E- The RAP uses PAPI to send data traffic to the controller.

Answer:

B

Question 7

Question Type: MultipleChoice

When does a RAP's backup SSID begin broadcasting?

Options:

- A- When the GRE tunnel to the controller is established.
- B- When the IPSec tunnel to the controller is established.

- C- When the controller cannot be reached with PAPI
- D- When bridging is required for guest users.
- E- When the controller cannot be reached with SSL

Answer:

C

Question 8

Question Type: MultipleChoice

When configuring split tunnel mode on a Remote AP (RAP) where is the routing function for the split tunnel defined?

Options:

- A- On the IP routing tab in the configuration screen.
- B- On the AP provisioning screen.
- C- In the RAP static routing tables
- D- In the Firewall policy

E- In the RAP whitelist

Answer:

D

Question 9

Question Type: MultipleChoice

Which of the following are valid RAP operating modes?

Options:

A- Always, Backup, Standard, Persistent

B- Always, Backup, Tunnel, Persistent

C- Always, Hotel-Connect, Tunnel, Standard

D- Backup, Hotel-Connect, Standard, Persistent

E- Backup, Normal, Tunnel, Always

Answer:

A
