Question 1
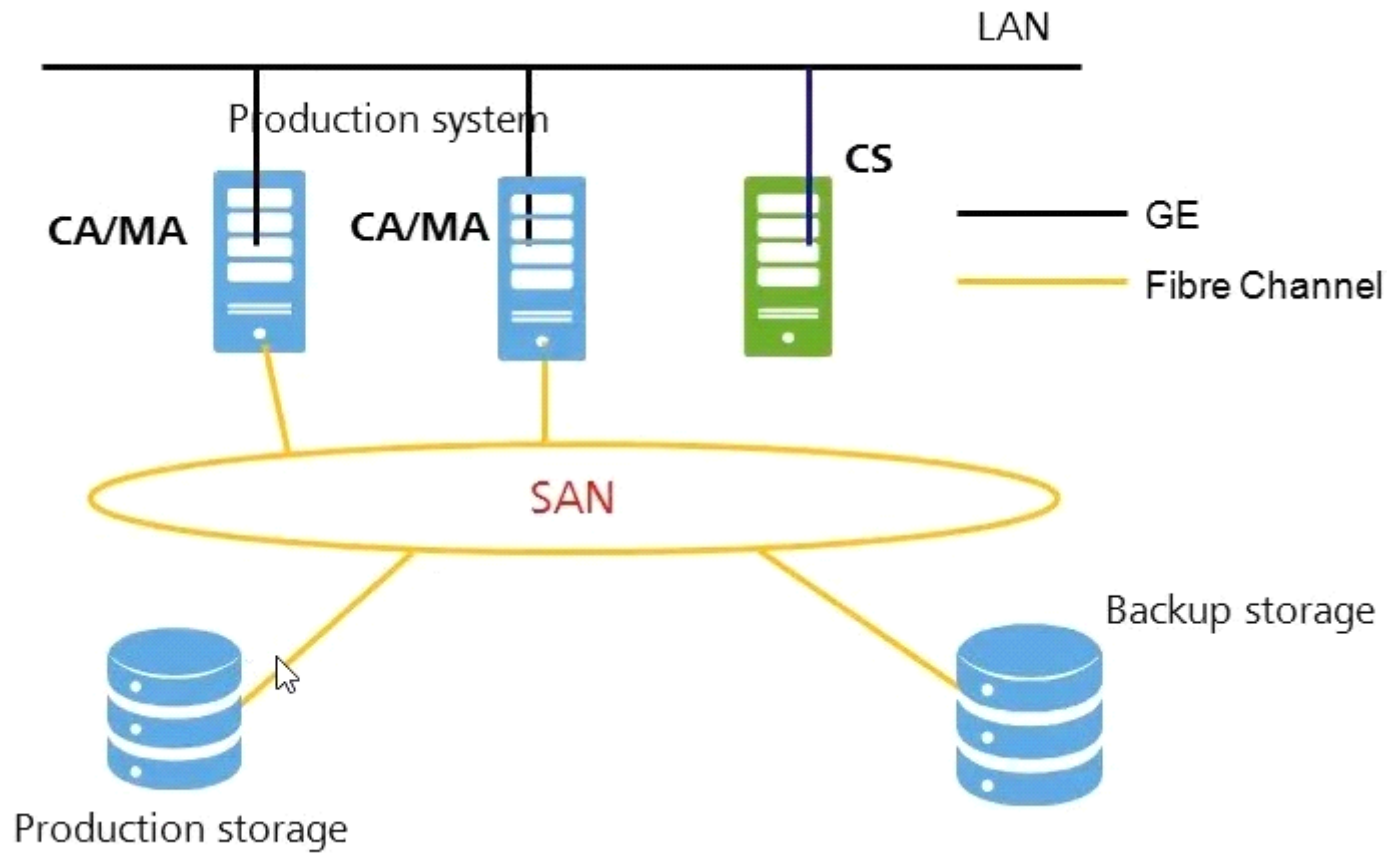

As shown in the figure, the main features of this backup network mode are:

(Multiple Choice)

Options:

A- Backup tasks will consume a lot of LAN resources.

B- Backup tasks will consume few LAN resources.

C- Backup tasks will consume a lot of CPU resources of the production system.

D- Backup tasks will consume few CPU resources of the production system.

Answer:

B, D

Question 2

Question Type: MultipleChoice

In Huawei OceanStor 9000, the CA that processes write requests divides data into strips based on the protection level and writes data strips into non-volatile dual in-line memory modules (NVDIMMs) if the corresponding nodes. Then these nodes calculate and write parity strips into their NVDIMMs. After all these nodes have successfully written parity strips, the write operation is successful.

Options:

A- TRUE

B- FALSE

Answer:

B

Question 3

Which commands are used to view SCSI controller information in RHEL5.5 (with Qlogic QLE2562-CK inside)?

Options:

A- lspci | grep SCSI

B- cat / proc / scsi / scsi

C- cat / proc / scsi / qla2xxx/* | grep port

D- lspci | grep Ethernet

Answer:

A, B, C

Question 4

In an application scenario, the I/O service model is random read, and the I/O size is about 100 KB. Then, which is the proper stripe depth for LUNs on the storage system?

Options:

A- 8 KB

B- 16 KB

C- 64 KB

D- 128 KB

Answer:

D

Explanation:

https://support.huawei.com/enterprise/my/doc/EDOC1000138855/56121aa5/creating-a-storage-pool

Question 5

In an OceanStor V3 storage system, a disk domain has multiple types of disks. If one SAS disk is added to the disk domain, all disks of the disk domain will participate in data balancing.

Options:

A- TRUE

B- FALSE

Answer:

B

Question 6

To use the storage space of OceanStor V3 more efficiently, a customer has specified file system quotas for different departments. If a soft quota alarm is generated for the file system used by department A, which methods can be used to clear the alarm and ensure that

new data can be successfully written?

(Multiple Choice)

Question 7

Question Type: **MultipleChoice**

Which statements are true about Huawei OceanStor V3 WORM feature? (Multiple Choice)

A- When a file is in the locked state, the file protection duration can be manually prolonged or shortened.

B- A locked file will shift to the expired state if the file system WORM clock value is greater than the file atime value.

C- After the WORM file system compliance clock has exceeded the file expiration time, an appending file will shift from the appending state to the expired state.

D- Only files of 0 byte can shift from the locked state to the appending state.

Answer:

B, C, D

Question 8

Question Type: MultipleChoice

Which statements are false about the file system quota feature of OceanStor V3? (Multiple Choice)

Options:

A- A quota tree can be shared using a protocol. In addition, a quota tree that is being shared cannot be renamed or deleted.

B- You can move files (NFS protocol) or cut files (CIFS protocol) across quota trees.

C- A hard link cannot be established between two different quota trees.

D- An administrator can delete non-empty quota trees through CLI or GUI.

Answer:

B, C, D

Question 9

Question Type: **MultipleChoice**

When cache mirroring is enabled for the two controllers of an OceanStor V3 storage system, the two controllers have identical cache data and the failure of either controller does not affect system services.

Options:

A- TRUE

B- FALSE

Answer:

B
