Question 1

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company implements Dynamics 365 Finance.

Forms and reports take longer than usual to open and run in the production environment.

You need to investigate the performance issue by using SQL Insights in Lifecycle Services (LCS).

Solution: Check for blocked queries and high DTU.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

A

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/performance-troubleshooting>

Question 2

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company implements Dynamics 365 Finance.

Forms and reports take longer than usual to open and run in the production environment.

You need to investigate the performance issue by using SQL Insights in Lifecycle Services (LCS).

Solution: Disable and enable page locks and lock escalation.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/performance-troubleshooting>

Question 3

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company implements Dynamics 365 Finance.

Forms and reports take longer than usual to open and run in the production environment.

You need to investigate the performance issue by using SQL Insights in Lifecycle Services (LCS).

Solution: Create a non-unique index on a table.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

B

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/performance-troubleshooting>

Question 4

Question Type: MultipleChoice

A company is implementing Dynamics 365 Supply Chain Management for multiple legal entities.

Each legal entity will be rolled out in a phased approach over a 24-month period. Some customizations will be required.

You need to define how to test Microsoft's continuous updates throughout the implementation lifecycle.

What should you recommend?

Options:

- A-** Use the SysTest Framework in a build or test environment.
- B-** Use the Performance software development kit (Perf SDK) in a build or test environment.
- C-** Use the SysTest Framework in a production environment.
- D-** Use the Regression suite automation tool (RSAT) with DevOps in a build or test environment.

Answer:

D

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/perf-test/rsat/rsat-overview>

Question 5

Question Type: MultipleChoice

A company plans to apply updates to a Dynamics 365 Finance environment. The environment has custom code.

You need to determine the impact of updates to the custom code.

What is the impact?

Options:

- A-** Updates are runtime backward compatible only.
- B-** Updates are backward compatible from both a design time and runtime perspective.
- C-** Updates are design-time backward compatible only.
- D-** Updates are not backward compatible from either a design-time or runtime perspective.

Answer:

B

Explanation:

<https://docs.microsoft.com/en-us/dynamics365/fin-ops-core/dev-itpro/lifecycle-services/oneversion-isv>

Question 6

Question Type: MultipleChoice

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

A company is planning to implement Dynamics 365 Supply Chain Management with three locations. Two locations must use United States currency (USD) as the default currency. The third location must use Canadian currency (CAD).

One US facility and the Canadian facility must use advanced warehouse functionality. The other US facility must use basic warehousing.

You need to configure the legal entity, site, and warehouse architecture to meet the requirements.

Solution: Create two legal entities, one for the US facilities and one for the Canadian facility.

Does the solution meet the goal?

Options:

A- Yes

B- No

Answer:

A

Explanation:
