# Question 1

---

**Question Type:** MultipleChoice

---

You have an on-premises Microsoft SQL server named SQL1 that hosts 50 databases.

You plan to migrate SQL 1 to Azure SQL Managed Instance.

You need to perform an offline migration of SQL 1. The solution must minimize administrative effort.

What should you include in the solution?

## Options:

---

**A-** SQL Server Migration Assistant (SSMA)

**B-** Azure Migrate

**C-** Data Migration Assistant (DMA)

**D-** Azure Database Migration Service

## Answer:

---

D

### Explanation:

---

This Azure service supports migration in the offline mode for applications that can afford downtime during the migration process. Unlike the continuous migration in online mode, offline mode migration runs a one-time restore of a full database backup from the source to the target

<https://learn.microsoft.com/en-us/azure/azure-sql/migration-guides/managed-instance/sql-server-to-managed-instance-overview?view=azuresql#compare-migration-options>

## Question 2

---

**Question Type:** MultipleChoice

---

What two parameters would you recommend set up to ensure that the new IPSCustomers database will scale to meet the workload demands?

### Options:

---

- A-** Define the maximum of CPU cores
- B-** Define the maximum resource limit per group of databases

- C-** Define the maximum of Database Transaction Units
- D-** Define the maximum of the allocated storage
- E-** Define the maximum size for a database

**Answer:**

---

C, E

## Question 3

---

**Question Type:** MultipleChoice

---

You are developing a sales application that will contain several Azure cloud services and handle different components of a transaction. Different cloud services will process customer orders, billing, payment inventory, and shipping.

You need to recommend a solution to enable the cloud services to asynchronously communicate transaction information by using XML messages.

What should you include in the recommendation?

**Options:**

---

- A- Azure Data Lake
- B- Azure Notification Hubs
- C- Azure Queue Storage
- D- Azure Service Fabric

**Answer:**

---

D

## Question 4

---

**Question Type:** MultipleChoice

---

You plan to deploy multiple instances of an Azure web app across several Azure regions.

You need to design an access solution for the app. The solution must meet the following replication requirements:

- \* Support rate limiting
- \* Balance requests between all instances.
- \* Ensure that users can access the app in the event of a regional outage

Solution: You use Azure Load Balancer to provide access to the app.

Does this meet the goal?

**Options:**

---

**A-** Yes

**B-** No

**Answer:**

---

B

## Question 5

---

**Question Type:** MultipleChoice

---

You plan to deploy multiple instances of an Azure web app across several Azure regions.

You need to design an access solution for the app. The solution must meet the following replication requirements;

- \* Support rate limiting.
- \* Balance requests between all instances.

\* Ensure that users can access the app in the event of a regional outage.

Solution: You use Azure Traffic Manager to provide access to the app Does this meet the goal?

### Options:

---

A- Yes

B- No

### Answer:

---

A

## Question 6

---

**Question Type:** MultipleChoice

---

You have an on-premises network and an Azure subscription. The on-premises network has several branch offices.

A branch office in Toronto contains a virtual machine named VM1 that is configured as a file server. Users access the shared files on VM1 from all the offices.

You need to recommend a solution to ensure that the users can access the shares files as quickly as possible if the Toronto branch office is inaccessible.

What should you include in the recommendation?

### Options:

---

- A- a Recovery Services vault and Azure Backup
- B- an Azure file share and Azure File Sync
- C- Azure blob containers and Azure File Sync
- D- a Recovery Services vault and Windows Server Backup

### Answer:

---

B

### Explanation:

---

Use Azure File Sync to centralize your organization's file shares in Azure Files, while keeping the flexibility, performance, and compatibility of an on-premises file server. Azure File Sync transforms Windows Server into a quick cache of your Azure file share.

You need an Azure file share in the same region that you want to deploy Azure File Sync.

Incorrect Answers:

A: Backups would be a slower solution.

<https://docs.microsoft.com/en-us/azure/storage/files/storage-sync-files-deployment-guide>

## Question 7

---

**Question Type:** MultipleChoice

---

You have an Azure subscription. The subscription has a blob container that contains multiple blobs. Ten users in the finance department of your company plan to access the blobs during the month of April. You need to recommend a solution to enable access to the blobs during the month of April only. Which security solution should you include in the recommendation?

### Options:

---

- A-** shared access signatures (SAS)
- B-** access keys
- C-** conditional access policies

**D-** certificates

**Answer:**

---

A

**Explanation:**

---

<https://docs.microsoft.com/en-us/azure/storage/common/storage-sas-overview>
