Question 1

Question Type: MultipleChoice

A multinational company is looking to rollout Salesforce globally. The company has a Microsoft Active Directory Federation Services (ADFS) implementation for the Americas, Europe and APAC. The company plans to have a single org and they would like to have all of its users access Salesforce using the ADFS . The company would like to limit its investments and prefer not to procure additional applications to satisfy the requirements.

What is recommended to ensure these requirements are met ?

Options:

- A-** Use connected apps for each ADFS implementation and implement Salesforce site to authenticate users across the ADFS system applicable to their geo.
- B-** Implement Identity Connect to provide single sign-on to Salesforce and federated across multiple ADFS systems.
- C-** Add a central identity system that federates between the ADFS systems and integrate with Salesforce for single sign-on.
- D-** Configure Each ADFS system under single sign-on settings and allow users to choose the system to authenticate during sign on to Salesforce-

Answer:

B

Question 2

Question Type: MultipleChoice

Universal Containers is implementing Salesforce Identity to broker authentication from its enterprise single sign-on (SSO) solution through Salesforce to third party applications using SAML.

What role does Salesforce Identity play in its relationship with the enterprise SSO system?

Options:

- A- Identity Provider (IdP)
- B- Resource Server
- C- Service Provider (SP)
- D- Client Application

Answer:

C

Question 3

Question Type: MultipleChoice

Uwversal Containers (UC) is building a custom employee hut) application on Amazon Web Services (AWS) and would like to store their users' credentials there. Users will also need access to Salesforce for internal operations. UC has tasked an identity architect with evaluating Afferent solutions for authentication and authorization between AWS and Salesforce.

How should an identity architect configure AWS to authenticate and authorize Salesforce users?

Options:

- A- Configure the custom employee app as a connected app.
- B- Configure AWS as an OpenID Connect Provider.
- C- Create a custom external authentication provider.
- D- Develop a custom Auth server in AWS.

Answer:

B

Question 4

Question Type: MultipleChoice

An Identity architect works for a multinational, multi-brand organization. As they work with the organization to understand their Customer Identity and Access Management requirements, the identity architect learns that the brand experience is different for each of the customer's sub-brands and each of these branded experiences must be carried through the login experience depending on which sub-brand the user is logging into.

Which solution should the architect recommend to support scalability and reduce maintenance costs, if the organization has more than 150 sub-brands?

Options:

- A-** Assign each sub-brand a unique Experience ID and use the Experience ID to dynamically brand the login experience.
- B-** Use Audiences to customize the login experience for each sub-brand and pass an audience ID to the community during the OAuth and Security Assertion Markup Language (SAML) flows.
- C-** Create a community subdomain for each sub-brand and customize the look and feel of the Login page for each community subdomain to match the brand.
- D-** Create a separate Salesforce org for each sub-brand so that each sub-brand has complete control over the user experience.

Answer:

A

Question 5

Question Type: MultipleChoice

A farming enterprise offers smart farming technology to its farmer customers, which includes a variety of sensors for livestock tracking, pest monitoring, climate monitoring etc. They plan to store all the data in Salesforce. They would also like to ensure timely maintenance of the Installed sensors. They have engaged a salesforce Architect to propose an appropriate way to generate sensor Information In Salesforce.

Which OAuth flow should the architect recommend?

Options:

- A- OAuth 2.0 Asset Token Flow
- B- OAuth 2.0 Device Authentication Row
- C- OAuth 2.0 JWT Bearer Token Flow
- D- OAuth 2.0 SAML Bearer Assertion Flow

Answer:

A

Question 6

Question Type: MultipleChoice

A technology enterprise is planning to implement single sign-on login for users. When users log in to the Salesforce User object custom field, data should be populated for new and existing users.

Which two steps should an identity architect recommend?

Choose 2 answers

Options:

- A- Implement Auth.SamlJitHandler Interface.
- B- Create and update methods.
- C- Implement RegistrationHandler Interface.
- D- Implement SessionManagement Class.

Answer:

A, B
