## Question 1

---

**Question Type:** MultipleChoice

---

When network failover is enabled, which of the following is true?

### Options:

---

- A- The failover cable status is ignored. Failover is determined by the network status only.
- B- Either a network failure or loss of voltage across the failover cable will cause a failover.
- C- A network failure will not cause a failover as long as there is a voltage across the failover cable.
- D- The presence or absence of voltage over the fail over cable takes precedence over network failover.

### Answer:

---

C

## Question 2

---

**Question Type:** MultipleChoice

---

As a part of the Setup Utility, the administrator sets the host name for the BIG IP. What would be the result if the two systems in a redundant pair were set to the same host name?

**Options:**

---

- A-** Host names do not matter in redundant pair communication.
- B-** In a redundant pair, the two systems will always have the same host name. The parameter is synchronized between the systems.
- C-** The first time the systems are synchronized the receiving system will be assigned the same self-IP addresses as the source system.
- D-** When the administrator attempts to access the configuration utility using the host name, they will always connect to the active system.

**Answer:**

---

C

## Question 3

---

**Question Type:** MultipleChoice

---

What is the purpose of floating self-IP addresses?

**Options:**

---

- A- to define an address that grants administrative access to either system at any time
- B- to define an address that allows either system to initiate communication at any time
- C- to define an address that allows network devices to route traffic via a single IP address
- D- to define an address that gives network devices greater flexibility in choosing a path to forward traffic

**Answer:**

---

C

## Question 4

---

**Question Type: MultipleChoice**

---

Which statement is true concerning a functional iRule?

**Options:**

---

- A- iRules use a proprietary syntax language.

- B- iRules must contain at least one event declaration.
- C- iRules must contain at least one conditional statement.
- D- iRules must contain at least one pool assignment statement.

**Answer:**

---

B

## Question 5

---

**Question Type: MultipleChoice**

---

A virtual server is listening at 10.10.1.100:any and has the following iRule associated with it:

```
when CLIENT_ACCEPTED { if {[TCP::local_port] equals 21 } { pool  
ftppool } elseif {[TCP::local_port] equals 23 } { pool telnetpool }
```

If a user connects to 10.10.1.100 and port 22, which pool will receive the request?

**Options:**

---

- A- ftpool
- B- telnetpool
- C- None. The request will be dropped.
- D- Unknown. The pool cannot be determined from the information provided.

**Answer:**

---

D

## Question 6

---

**Question Type:** MultipleChoice

---

A virtual server is listening at 10.10.1.100:80 and has the following iRule associated with it:

```
when HTTP_REQUEST { if { [HTTP::header UserAgent] contains "MSIE" }
```

```
{ pool MSIE_pool }
```

```
else { pool Mozilla_pool }
```

**Options:**

---

- A- MSIE\_pool
- B- Mozilla\_pool
- C- None. The request will be dropped.
- D- Unknown. The pool cannot be determined from the information provided.

**Answer:**

---

B

## Question 7

---

**Question Type:** MultipleChoice

---

Which statement describes a typical purpose of iRules?

**Options:**

---

- A- iRules can be used to add individual control characters to an HTTP data stream.
- B- iRules can be used to update the timers on monitors as a server load changes.
- C- iRules can examine a server response and remove it from a pool if the response is unexpected.

**D-** iRules can be used to look at client requests and server responses to choose a pool member to select for load balancing

**Answer:**

---

A
