# Question 1

---

## Question Type: MultipleChoice

---

Refer to the exhibit. The ge0/0 interface connects to a 30-MB link. A network administrator wants to always have 10 MB available for high priority traffic. When lower-priority traffic busts exceed 20 MB. Traffic should be redirected to the second WAN interface ge0/1. Which set of configurations accomplishes this task?

A)

B)

C)

D)

Image not found or type unknown

### Options:

---

- A) Option A
- B) Option B
- C) Option C
- D) Option D

### Answer:

---

C

### Explanation:

---

```
policy
  policer bursty-traffic
    rate 1000000
    burst 20000
    exceed remark
access-list policer-bursty-traffic
  sequence 10
  match
    source-ip 56.0.1.0/24
  action accept
    policer bursty-traffic
  default-action accept
```

## Question 2

---

**Question Type:** MultipleChoice

---

Refer to the exhibit. An administrator is configuring a policy in addition to an existing hub-and-spoke policy for two sites that should directly communicate with each other. How is this policy configured?

**Options:**

---

- A) hub-and-spoke
- B) mesh
- C) import existing topology
- D) custom control (route and TLOC)

**Answer:**

---

D

**Explanation:**

---

[https://www.cisco.com/c/en/us/td/docs/routers/sdwan/configuration/policies/vedge/policies-book/controlpolicies.html#id\\_107219](https://www.cisco.com/c/en/us/td/docs/routers/sdwan/configuration/policies/vedge/policies-book/controlpolicies.html#id_107219)

## Question 3

---

**Question Type: MultipleChoice**

---

Refer to the exhibit. Which configuration stops Netconf CLI logging on WAN Edge devices during migration?

Image not found or type unknown

### Options:

---

- A) Option A
- B) Option B
- C) Option C
- D) Option D

### Answer:

---

B

### Explanation:

---

<https://www.cisco.com/c/en/us/td/docs/routers/sdwan/command/sdwan-cr-book/config-cmd.html#wp3867250313>

Syslog messages related to AAA authentication and Netconf CLI access and usage are placed in the auth.log and messages files. Each time Cisco vManage logs into a Cisco vEdge device to retrieve statistics and status information and to push files to the router, the router generates AAA and Netconf log messages. So, over time these messages can fill the log files. To prevent these messages from filling the log files, you can disable the logging of AAA and Netconf syslog messages:

```
Device(config)# system aaa logsViptela(config-logs)# audit-disableViptela(config-logs)# netconf-disable
```

## Question 4

---

**Question Type:** MultipleChoice

---

Refer to the exhibit. The network administrator has configured a centralized topology policy that results in the displayed routing table at a branch office. Which two configurations are verified by the output? [Choose two.]

### Options:

---

- A) The routing table is for the transport VPN.
- B) The default route is learned via OMP.
- C) This routing table is from a cEdge router.
- D) The default route is configured locally.
- E) The configured policy is adding a route tag of 300 to learned routes.

### Answer:

---

B, C

## Question 5

---

### Question Type: MultipleChoice

---

Refer to the exhibit. Which configuration extends the INET interface on R1 to be used by R2 for control and data connections?

A)

B)

C)

**Options:**

---

- A) Option A
- B) Option B
- C) Option C

**Answer:**

---

C

**Explanation:**

---

<https://www.ciscolive.com/c/dam/r/ciscolive/us/docs/2018/pdf/BRKRST-2091.pdf>

Subinterfaces require a physical, parent interface to be defined in VPN 0, and also require the subinterface MTU to be four bytes lower than the physical interface due to the 802.1q tag. It is recommended to configure **the parent physical interface for an MTU of 1504 to take care of this requirement.**

## Question 6

---

**Question Type:** MultipleChoice

---

Refer to the exhibit, Which configuration routes Site 2 through the firewall in Site 1?

Image not found or type unknown

### Options:

---

- A) Option A
- B) Option B
- C) Option C
- D) Option D

### Answer:

---

D

### Explanation:

---

<https://www.cisco.com/c/en/us/td/docs/routers/sdwan/configuration/policies/vedge-20-x/policies-book/service-chaining.html>

Here is the configuration procedure:

1. On the hub router, provision the firewall service, specifying the IP address of the firewall device. With this configuration, OMP on the hub router advertises one service route to the Cisco vSmart Controller. The service route contains a number of properties that identify the location of the firewall, including the TLOC of the hub router and a service label of svc-id-1, which identifies the service type as a firewall. (As mentioned above, before advertising the route, the device ensures that the firewall's IP address can be resolved locally.)

```
vpn 10
  service FW address 1.1.1.1
```

2. On the Cisco vSmart Controller, configure a control policy that redirects data traffic traveling from Site 1 to Site 2 through the firewall. Then, also on the Cisco vSmart Controller, apply this policy to Site 1.

```
policy
  lists
    site-list firewall-sites
      site-id 1
    control-policy firewall-service
      sequence 10
      match route
        site-id 2
      action accept
      set service FW vpn 10
      default-action accept
  apply-policy
    site-list firewall-sites control-policy firewall-service out
```
