Question 1

Question Type: MultipleChoice

You plan to migrate an SAP database from Oracle to Microsoft SQL Server by using the SQL Server Migration Assistant (SSMA).

You are configuring a Proof of Concept (PoC) for the database migration You plan to perform the migration multiple times as part of the PoC.

You need to ensure that you can perform the migrations as quickly as possible. The solution must ensure that all Oracle schemas are migrated.

Which migration method and migration mode should you use? To answer, select the appropriate options in the answer area

NOTE: Each correct selection is worth one point.

Options:

A- Explanation:

Answer selected as in image below.

Answer Area

Migration method: Synchronization ▼

Migration mode: Default ▼

Answer:

A

Question 2

Question Type: MultipleChoice

You have a Recovery Services vault backup policy for SAP HANA on an Azure virtual machine as shown in the following exhibit.

HANA

Backup policy

 Associated items  Modify  Delete

[Learn more and get FAQs about Backup policy](#) 

FULL BACKUP

Backup Frequency

Daily at 7:00 PM UTC

Retention of daily backup point

Retain backup taken every day at 7:00 PM for 7 Day(s)

Retention of weekly backup point

Retain backup taken every week on Sunday at 7:00 PM for 12 Week(s)

Retention of monthly backup point

Retain backup taken every month on First Sunday at 7:00 PM for 4 Month(s)

Retention of yearly backup point

Retain backup taken every year in January on First Sunday at 7:00 PM for 7 Year(s)

LOG BACKUP

Backup schedule

Every 1 hour

Retained for

7 days

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

Options:

A- Explanation:

Answer selected as in image below.

Answer Area

The backup policy will support a recovery point objective (RPO) of [answer choice] for restoring HANA.

The HANA logs can be rolled back for up to [answer choice].

Answer:

A

Question 3

Question Type: MultipleChoice

You have an SAP production landscape that uses SAP HANA databases on Azure.

You need to deploy a disaster recovery solution to the SAP HANA databases. The solution must meet the following requirements:

- * Support failover between Azure regions.
- * Minimize data loss in the event of a failover.

What should you deploy?

Options:

- A-** Azure Site Recovery
- B-** Always On availability group
- C-** HANA system replication that uses asynchronous replication
- D-** HANA system replication that uses synchronous replication

Answer:

C

Question 4

Question Type: MultipleChoice

You are implementing a highly available deployment of SAP HANA on Azure virtual machines. You need to ensure that the deployment meets the following requirements:

- * Supports host auto-failover
- * Minimizes cost

How should you configure the highly available components of the deployment? To answer, select the appropriate options in the answer area

a. NOTE: Each correct selection is worth one point.

Options:

A- Explanation:

Answer selected as in image below.

Answer Area

HANA database and log volumes: Premium SSD disks ▼

I/O fencing: NFSv3 ▼

Answer:

A

Question 5

Question Type: MultipleChoice

You are planning a highly available SAP HANA deployment on Azure virtual machines.

You need to recommend a solution for monitoring TCP latency between the SAP application and the database tiers on the TCP socket layer.

What should you include in the recommendation?

Options:

A- the Azure Network Watcher reachability report

B- Azure Extension for SAP

C- the NIPING command

D- the PING command

Answer:

A

Question 6

Question Type: MultipleChoice

You have an SAP production landscape that uses SAP HANA databases on Azure. The HANA database server is a Standard.M32ms Azure virtual machine that has 864 GB of RAM.

The HANA database is 400 GB. You expect the database to grow by 40 percent during the next 12 months.

You resize the HANA database server virtual machine to Standard_m64ms and ,024 GB of RAM.

You need to recommend additional changes to minimize performance degradation caused by database growth

What should you recommend for the HANA database server?

Options:

A- Increase the number of vCPUs.

B- Configure additional disks

C- Add a secondary network interface.

D- Add a scale out node.

Answer:

A

Question 7

Question Type: MultipleChoice

You deploy an SAP landscape on Azure.

You plan to use an Azure Automation account to stop the SAP virtual machines outside of business hours.

You need to ensure that you can use Azure Automation runbook a for the virtual machines.

What does the Azure Automation account require?

Options:

A- an Azure Storage account

B- an Azure App Service WebJob

C- a Recovery Services vault

D- a Run As account

Answer:

B
