## Question 1

---

**Question Type:** MultipleChoice

---

A behavior analyst has been consulting for a client who repeatedly pushes her knuckles into her eyes. After conducting a functional analysis, implementing a function-based intervention plan, and ensuring all staff were thoroughly trained on the intervention procedures, data indicate the client's behavior has increased over the last month. What consideration is MOST likely to have been overlooked prior to conducting the FA?

### Options:

---

- A- The behavior may be a symptom of the client's disability.
- B- Staff may lack competence for carrying out the intervention.
- C- There may be a biological/medical variable affecting the client.
- D- The increase in the behavior should have been anticipated due to an extinction burst.

### Answer:

---

C

## Question 2

---

**Question Type: MultipleChoice**

---

## Question 5

---

**Question Type:** MultipleChoice

---

Steven lives in a group home with four other men. Most of his housemates spend about equal amounts of time in the living room and the recreation room. Steven spends about 75% of his free time in the living room and 25% in the recreation room. Staff observations have shown that staff attention is very reinforcing for Steven. If the matching law is operating in this scenario, what is the predicted rate of staff attention to Steven in the living room?

**Options:**

---

- A-** It is 1/3 of the rate in the recreation room.

- B-** It is 3 times the rate in the recreation room.
- C-** It matches the rate of attention in the recreation room.
- D-** It matches the average rate of attention in the two rooms.

**Answer:**

---

B

## Question 6

---

**Question Type:** MultipleChoice

---

A DRO was implemented for a young child with developmental delays to address reduction in the behavior of hair pulling. The child also has excessive levels of nose picking, and skin picking.
