Question 1

Question Type: MultipleChoice

Which of the following statements are correct in relation to Blue Prism Runtime Resources. Interactive Clients and Application Servers?
(select one)

Options:

- A-** There is a separate installer for each component
- B-** A single installer is used irrespective of which component is required. The configuration after install defines what component(s) will be available on the device
- C-** Once the Application Server has been installed, all other components can be configured to self-install
- D-** All of the above

Answer:

A

Question 2

Question Type: MultipleChoice

Where an environment has Blue Application Server(s) deployed, can Runtime Resources and Interactive Client be connected directory to the database? (select one)

Options:

- A-** Yes it is potentially possible but this is not generally recommended. Devices connected directly to the database may be limited in terms of managing or leveraging Credentials
- B-** No. all Runtime Resources and Interactive Clients must be connected to the database a a Blue Prism Application Server
- C-** Yes. but Runtime Resources that are connected directly to the database cannot be instructed to start processes by the scheduler

Answer:

A

Question 3

Question Type: MultipleChoice

Which of the following statements is correct? (select two)

Options:

- A- Each Blue Prism environment (e g Dev/UATProd) will have a Single database
- B- Each Blue Prism environment (e g Dev/UATProd)will potentially have many databases
- C- Each Blue Prism environment (e g Dev/UATProd) can have many Application Servers but they will all connect to the same database
- D- Each Blue From environment (e g Dev/UATProd) can have marry Application Servers but they will all connect separate databases
- E- Each Blue Prism environment (e g Dev/UATProd)can nave one Application Server but can connect to many databases

Answer:

B, D

Question 4

Question Type: MultipleChoice

What is the Blue Prism interactive Client used for? (select three)

Options:

- A- It is responsible for automatically starting and stopping schedules
- B- In non-production environment. it is where automated processes are designed and verified
- C- In production environments, it is where automated processes are designed
- D- In production environments, it is used to monitor and control the platform
- E- In production environment, it is used to configure the platform and define schedules
- F- It is responsible for providing database connectivity to at connected devices

Answer:

A, B, D

Question 5

Question Type: MultipleChoice

What are benefits of Login Agent? (select four)

Options:

- A- Provides a Login Agent Runtime Resource which can receive simple instructions Prior being in a logged in state

- B-** Allows a Login Agent Runtime Resource to immediately automatically login using saved credentials as part of a device reboot
- C-** Removes the requirement for locally stored device credentials
- D-** Provides the ability to manually instruct login Agent Runtime Resource to login
- E-** Provides the ability to schedule when a Login Agent Runtime Resource will be logged in
- F-** Allows processes which interact with locally installed application to be executed without the device being logged in

Answer:

B, C, D, E

Question 6

Question Type: MultipleChoice

Is it possible to configure a Blue Prism environment without an Application Server? (select one)

Options:

- A-** No. every environment must have an Application Server
- B-** Yes. Although this is not recommended production environment's, or environments intended to be reflective or production environments (e.g. Dev/Test)

Answer:

B

Question 7

Question Type: MultipleChoice

Which if the following statements are true? (select two)

Options:

- A-** All work queue items are automatically encrypted using the most cryptographically strong scheme that has been configured within the environment
- B-** Only Work Queue items associated with Work Queues that have been associated with an Encryption Scheme will be encrypted
- C-** Work Queue Items will be encrypted using the algorithm and Key on the Encryption Scheme associated with the Work Queue
- D-** Work Queue Items will be encrypted using the algorithm on the Encryption Scheme associated with the Work Queue and a key that is randomly generated when the Application Server restarts
- E-** Work Queue Items cannot be encrypted

Answer:

B, C

Question 8

Question Type: MultipleChoice

Which of me following are components within a Blue Prism Architecture? (select four)

Options:

- A- Blue Prism Consolidation Prowler
- B- Blue Prism Runtime Resource
- C- Blue Prism Interactive Client
- D- Blue Prism Application Server
- E- Blue Prism Database

Answer:

B, C, D, E

Question 9

Question Type: MultipleChoice

Which of the following features are only available when using a Blue Prism Application Server (select three)

Options:

- A- Release manage'
- B- Credential manager where the key encryption key is stored in the database
- C- Credential manager when the key encryption key is stored m a tile
- D- Single sign-on authentication for Blue Prism
- E- Schedules
- F- Database connection marshaling / proxy

Answer:

B, D, E

Question 10

Question Type: MultipleChoice

Why can't Blue Prism be configured to lock out users after 5 failed attempts? (select one)

Options:

- A-** When using Blue Prism native authentication this is not necessary as the client runs on a Windows operating system
- B-** It can, When using Slue Prism native authentication password security and lock out options are configurable
- C-** It is tweeted that at employments will use Single Sign on which negates this requirement

Answer:

C

Question 11

Question Type: MultipleChoice

When should the Blue Prism setting Sun the process engine on this machine when users sign in be disabled? (select one)

Options:

- A- Not Applicable - This setting does not exist
- B- When the Interactive Client will only be used for controlling and monitoring a Blue Prism environment (rather than running automations locally)
- C- When the interactive client will be used to run automations locally
- D- It should always be disabled for all environments

Answer:

A
