Question 1

The SteelHead Out of Band splice (OOB) uses which addressing mode? Assume a default configuration.

Options:

A- Always correct addressing.

B- Depends on which addressing mode the first optimized connection uses.

C- Always transparent addressing.

D- Always destination transparency.

Answer:

A

Question 2

What is the purpose of 'Peer Affinity' on the Interceptor?

Options:

A- To keep similarly sized SteelHead models peering with each other.

B- To ensure load is distributed evenly throughout the cluster.

C- To maximize the benefits of SDR by maintaining SteelHead peering relationships.

D- To ensure asymmetrically routed connections are optimized.

E- To make sure cluster SteelHeads remain connected to the same Interceptor.

Answer:

A

Question 3

Question Type: MultipleChoice

What is the first step in optimizing an SMTPS session?

A- An unencrypted SMTP connection is intercepted and optimized, before a START-TLS is issued.

B- START-TLS is issued immediately by the client and intercepted by the client side SteelHead.

C- SteelHeads do not currently support optimizing SMTPS sessions.

D- An SSL client HELLO is sent by the client and intercepted by the client side SteelHead.

Answer:

A

Question 4

Question Type: **MultipleChoice**

A SteelHead is running RiOS v8.6 and has an inpath0_0 IP address of 192.168.1.10. It is later upgraded from v8.6 to v9.0. As part of an IT project, the inpath0_0 IP address is changed to 10.10.10.10 and the configuration saved. Some time passes and the administrator decides to revert to RiOS v 8.6. It hasn't been factory reset. The appliance boots and the Management Console User Interface is reachable, however, optimization no longer works. What has happened?

Options:

A- The web GUI SSL certificate is no longer trusted and the services require a restart.

B- The licenses are no longer valid and will need to be replaced and the services restarted.

C- It is not possible to revert to older versions of RiOS and the optimization service has stopped as a precaution.

D- The configuration has reverted to the one running under v8.6 and the inpath0_0 IP address is back to 192.168.1.10.

E- The configuration has been lost and the appliance is running factory default settings.

Answer:

D

Question 5

Question Type: MultipleChoice

Which deployment options are available to Virtual SteelHead on ESXi?

Options:

A- Physical In-path (with Riverbed bypass NIC)

B- Virtual In-path

C- Out-of-path

D- Server-side Out-of-Path

E- All of the above

Answer:

A, B, C

Question 6

Question Type: MultipleChoice

A customer uses a single URL for a service that uses many servers with different certificates. What SSL options should be enabled to enhance performance?

Options:

A- Passive key derivation

B- SSL proxy support and SNI (Server name indication)

C- SSL advanced mode

D- Early start/late finish
