Question 1

Question Type: MultipleChoice

What's the difference between an upstream project and a downstream project?

Options:

A- An upstream project has more build steps

B- An upstream project triggers a downstream project.

C- A downstream project produces no artifacts.

D- A downstream project triggers an upstream project.

Answer:

B

Explanation:

The relationship between the projects is what determines downstream versus upstream. The upstream job triggers the downstream job, and vice versa.

Question 2

Question Type: MultipleChoice

In a JUnit report, if we set the "Health report amplification factor" to 2 and there's a 1% failure, what's the health score?

Options:

A- 98%

B- 80%

C- 60%

D- 75%

Answer:

A

Explanation:

You would take 100% then subtract (1%*2), thus 98%.

Question 3

Question Type: MultipleChoice

What do you need to configure an SSH agent?

Options:

A- A username and password configured for the slave node

B- SSH keys with the Master's pub key set as an authorized key on the agent node

C- No special authorization setup

D- None of these

Answer:

B

Explanation:

You'll need to configure key-based auth to utilize the SSH agent.

Question 4

Question Type: MultipleChoice

How do you setup the GitHub Plugin Git hook from a Project Configuration Perspective?

Options:

A- Set the 'Build Periodically' trigger, but you don't have to specify an interval

B- None of these

C- Set the 'GitHub hook trigger for GITScm polling' trigger

D- Set the 'Poll scm' trigger, but you don't have to specify an interval

Answer:

C

Question 5

Question Type: MultipleChoice

Which is a valid agent declaration?

Options:

A- agent any

B- agent { label 'Slave 1'}

C- agent none

D- All of these

Answer:

D

Explanation:

These are all valid invocations of agents in a Jenkinsfile.

Question 6

Question Type: MultipleChoice

Where does the Jenkinsfile live?

Options:

A- /var/lib/jenkins

B- /etc/jenkins

C- With your source code

D- None of these

Answer:

C

Explanation:

The Jenkinsfile typically lives in the root of your project SCM repository.
