Question 1

Question Type: MultipleChoice

Where, in a protocol analyzer, would you find an indication that a frame was transmitted as part of an AMPDU?

Options:

- A- The HT Operation Element
- B- A-MPDU flag in the HT Control Field
- C- A-MPDU flag in the Frame Control Field
- D- The Aggregation flag in the Radio Tap Header

Answer:

B

Question 2

Question Type: MultipleChoice

You are analyzing a packet decode of a Probe Request and notice the SSID element has a length of zero.

What do you conclude about transmitting STA?

Options:

- A- The WLAN adaptor is configured in promiscuous mode
- B- The STA is operating in Ad-Hoc mode
- C- The STA's WLAN adaptor is disabled
- D- The STA is discovering a list of available BSSs

Answer:

B

Question 3

Question Type: MultipleChoice

During a VHT Transmit Beamforming sounding exchange, the beamformee transmits a Compressed

Beamforming frame to the beamformer. What is communicated within this Compressed Beamforming frame?

Options:

- A- Steering Matrix
- B- Beamforming Matrix
- C- Feedback Matrix
- D- Beamformee Matrix

Answer:

C

Question 4

Question Type: MultipleChoice

As a wireless network consultant you have been called in to troubleshoot a high-priority issue for one of your customers. The customer's office is based on two floors within a multi-tenant office block. On one of these floors (floor 5) users cannot connect to the wireless network. During their own testing the customer has discovered that users can connect on floor 6 but not when they move to the floor 5. This issue is affecting all users on floor 5 and having a negative effect on productivity.

To troubleshoot this issue, you perform both Spectrum and Protocol Analysis. The Spectrum Analysis shows the presence of Bluetooth signals which you have identified as coming from wireless mice. In the protocol analyzer you see the top frame on the network is Deauthentication frames. On closer investigation you see that the Deauthentication frames' source addresses match the BSSIDs of your customers APs and the destination address is FF:FF:FF:FF:FF:FF.

What do you conclude from this troubleshooting exercise?

Options:

- A-** The customer should replace all their Bluetooth wireless mice as they are stopping the users on floor 5 from connecting to the wireless network
- B-** The users on floor 5 are being subjected to a denial of service attack, as this is happening across the entire floor it is likely to be a misconfigured WIPS solution belonging to the tenants on the floor below
- C-** The customers APs are misbehaving and a technical support case should be open with the vendor
- D-** The CCI from the APs on the floor 4 is the problem and you need to ask the tenant below to turn down their AP's Tx power

Answer:

A

Question 5

Question Type: MultipleChoice

Which one of the following is not a valid reason for an AP to fail a STAs association?

Options:

- A- Requesting station has the wrong PSK
- B- Does not support the specified authentication algorithm
- C- AP is unable to handle additional associations
- D- Requesting station does not support all the required data rates

Answer:

A

Question 6

Question Type: MultipleChoice

What is encrypted within the fourth frame of the 4-Way Handshake?

Options:

A- PMK

B- PTK

C- GMK

D- GTK

Answer:

D
