Question 1

Question Type: MultipleChoice

The administrator configures the HTTP server for storing alarms through FusionCompute.

View the stored alarm information on the corresponding HTTP server. If the alarm dump is not configured, the system will report After a certain number of entries are exceeded, the latest alarm information will be automatically cleared to free up space. If alarm dump is configured,

It will dump the earliest certain entry alarms to the HTTP server

A, TRUE

Options:

B- FALSE

Answer:

B

Question 2

Question Type: MultipleChoice

The ManageOne operation and maintenance plane provides the unified log function. Which of the following log types does the unified log support? (many)

Options:

- A- Management side operation log
- B- Operation log
- C- Security log
- D- Tenant operation log

Answer:

B, C, D

Question 3

Question Type: MultipleChoice

When Fusioncloud is deployed, at least 2 servers are required for its management node deployment, which can use AA (active-active-active) mode to improve the high availability of system management nodes

Options:

A- TRUE

B- FALSE

Answer:

B

Question 4

Question Type: MultipleChoice

The following description about the design of the bare metal resource area in the FusionCloud private cloud planning is correct which items? (many)

Options:

- A-** The bare metal resource pool needs a separate POD, and the POD needs to contain the cascaded layers Openstack and BMGW
- B-** The bare metal server supports RH2288H and RH5885H servers, and supports user-defined selection Resources such as CPU/memory
- C-** Only one set of storage resource pools can be used in the bare metal resource pool, and only FusionStorage can be selected. Select SA Storage
- D-** Bare metal is divided into: general bare metal, memory optimized bare metal, local disk intensive bare metal, IO optimized bare metal bare metal

Answer:

A, D

Question 5

Question Type: MultipleChoice

The incremental backup of eBackup uses differential incremental backup. Compared with cumulative incremental backup, Minimal data needs to be copied.

Options:

A- TRUE

B- FALSE

Answer:

A

Question 6

Question Type: MultipleChoice

In the Huawei Fusioncloud private cloud scenario, the VPC can provide a secure and isolated network environment for the VDC, and provide network resources for applications or virtual machines in the VDC. The following about lans+ service planning PC the description of the Console node, which items are correct? (many)

Options:

A- Provide VPC WEB interface service

B- The Console node is deployed in two clusters and connected to NGINX for load balancing

C- The configuration information used to store the deployment mode of user business data

D- Provide the transparent transmission function of the WEB interface

Answer:

A, B

Question 7

Question Type: MultipleChoice

FusionAccess fails to issue a virtual machine. Which of the following methods can be used to locate the fault? (many)

Options:

A- Look at the FusionAccess system error message

B- View the FusionAccess log

C- View system alarms

D- Check whether the AccessAgent version of the virtual machine matches the version of the FusionAccess system

Answer:

A, B, C, D

Question 8

Question Type: MultipleChoice

Use the Rainbow tool for migration operations, after the migration of the operating system's magnetic, network card, system, etc.

Configuration may change. Which of the following descriptions about the system changes after the Rainbow River relocation are correct item? (many)

Options:

- A- The license needs to be reactivated after Windows migration
- B- Disk drives may change after migration
- C- The network card MAC and IP address will change
- D- Windows dynamic disk will become a shared disk after migration

Answer:

A, C

Question 9

Question Type: MultipleChoice

Using Rainbow to migrate the virtual machine of the original Hper-V virtualization platform to FusionSphere

In the cloud platform, which of the following descriptions are correct? (many)

Options:

- A- Support Windows system file-level migration CPU utilization control
- B- Rainbow hConvertor can support offline migration
- C- Support Linux system file-level migration timing startup
- D- Both Windows system and Linux system migration tasks support block-level migration

Answer:

B, C

Question 10

Question Type: MultipleChoice

Which of the following descriptions about the functions of the FusionCloud Task Center TaskCenter is wrong? (one)

Options:

A- The VDC administrator can view the task execution status and task execution status of the VDC and its subordinate VDCs in the task list.

The creator of the task, the start time of the task, the end time, etc.

B- The operation administrator can view the task execution status and task creation status of all operation administrators in the task list. Builder, task start time, end time, etc.

C- The agent administrator can view the task execution status of its agent VDC and its subordinate VDCs in the task list, The creator of the task, the start time of the task, the end time and other information

D- The VDC salesperson can view the task execution status and task execution status of this VDC salesperson and its subordinate VDC salespersons.

The creator of the task, the start time of the task, the end time, etc.

Answer:

D

Question 11

Question Type: MultipleChoice

Huawei Desktop Cloud launched a sub-HD mapping desktop solution, which can support a variety of high-definition mapping software.

According to its 3D display implementation principle, which of the following technologies are mainly used? (Multiple)

Options:

- A- graphics workstation management
- B- GPU hardware virtualization
- C- GPU pass-through
- D- Device redirection

Answer:

B, C
