Question 1

Question Type: MultipleChoice

Which of the following descriptions are correct for cross-zone coverage? (Multiple choice)

Options:

- A-** Over-area coverage may form 'islands', leading to dropped calls
- B-** Cross-area coverage may cause UE transmit power limitation, causing access failure
- C-** Cross-area coverage may result in unbalanced load between the cross-covered base station and surrounding base stations, resulting in low resource utilization of surrounding base stations
- D-** For LTE, cross-area coverage will not cause interference to its neighboring cells

Answer:

A, B, C

Question 2

Question Type: MultipleChoice

Which of the following information can be directly observed through the Probe drive test tool? (multiple choice)

Options:

- A- PUSCH, PUCCH, RACH and SRS physical channel transmit power.
- B- TM mode
- C- Number of occupied carriers
- D- UE real-time transmit power

Answer:

A, B, C

Question 3

Question Type: MultipleChoice

What is included in the detailed survey of the base station? (multiple choice)

Options:

- A- Base station location
- B- Computer room construction
- C- Antenna selection
- D- Determine at least 3 alternative sites
- E- Equipment installation location

Answer:

A, B, C, E

Question 4

Question Type: MultipleChoice

ASSTTANT is a front-end test tool independently developed by Huawei, which can display test data, replay test data, and export test data.

Options:

A- True

B- False

Answer:

B

Question 5

Question Type: MultipleChoice

The reason values for LTE RRC establishment include: emergency call, high Priority Access, x-mt-Access, mo-Signalling and mo-Data.

Options:

A- True

B- False

Answer:

A

Question 6

Question Type: MultipleChoice

Which of the following factors does not need to be considered when dividing a Cluster?

Options:

- A- terrain
- B- Traffic
- C- Test route
- D- weather

Answer:

D

Question 7

Question Type: MultipleChoice

The insertion loss of the cavity power divider is larger than that of the microstrip power divider.

Options:

A- True

B- False

Answer:

B

Question 8

Question Type: MultipleChoice

In the LTE system, the mobility KPI is used to evaluate the mobility performance of the E-LTTRAN network. It directly reflects the quality of the user experience. Which of the following is not a mobility KPI?

Options:

- A- The success rate of switching out (same frequency/different frequency)
- B- Call establishment success rate
- C- Switch in success rate
- D- Success rate of switching out different systems

Answer:

B

Question 9

Question Type: MultipleChoice

For the E-band of the LTE network, which system has the greatest impact on interference?

Options:

- A- GSM 900M
- B- GSM 1800M
- C- TD-SCDMA

D- WLAN

Answer:

D

Question 10

Question Type: MultipleChoice

In the case of FTP download or upload (or packet filling) without manual intervention, the throughput rate should be maintained at this time. If there is a sudden drop, call drops may occur.

Options:

A- True

B- False

Answer:

A
