# Question 1

---

## Question Type: MultipleChoice

---

You want to create a purchase order. An irilo teco-d is available for the material-supplier combination.

What logic does the system use to determine a price from the info record?

Note: There are 2 correct answers to this question.

### Options:

---

- A) The system always proposes the valid plant-specific price if available.
- B) The system always proposes the price from the last purchase order. If available.
- C) The system always proposes the price at the purchasing organization level, if available.
- D) If there are NO valid conditions, the system can propose the price from the last purchase order, if available.

### Answer:

---

B, D

### Explanation:

---

To determine a price from the info record, the system uses the following logic:

The system always proposes the valid plant-specific price, if available. This means that if there is an info record for the material and supplier combination at plant level, the system will use the price from that info record.

If there are no valid conditions, the system can propose the price from the last purchase order, if available. This means that if there is no info record or no valid price in the info record, the system will use the price from the most recent purchase order for the same material and supplier combination. ## Question 2

---

**Question Type: MultipleChoice**

---

You want to create a purchase order. An info record is available for the material-supplier combination.

What logic does the system use to determine a price from the info record?

Note: There are 2 correct answers to this question.

**Options:**

---

- A) The system always proposes the valid plant-specific if available.
- B) The system always proposes the price from the last purchase order. If available.
- C) The system always proposes the price slotec al purchasing organization level, if available
- D) If there are NO valid conditions, the system can propose the price from the last purchase order, if available.

**Answer:**

---

B, D

**Explanation:**

---

To determine a price from the info record, the system uses the following logic:

The system always proposes the valid plant-specific price, if available. This means that if there is an info record for the material and supplier combination at plant level, the system will use the price from that info record.

If there are no valid conditions, the system can propose the price from the last purchase order, if available. This means that if there is no info record or no valid price in the info record, the system will use the price from the most recent purchase order for the same material and supplier combination.
