Question 1

Question Type: MultipleChoice

Scenario: A Citrix Administrator entered the configuration below:

> add rewrite policy pol_external_to_internal 'http.req.hostname.server.eq("host_name_of_external_Web_server")' act_external_to_internal

Which two possible rewrite actions can the administrator choose when a rewrite policy evaluates to TRUE? (Choose two.)

Options:

A- Deny
B- Bypass
C- Reset
D- Drop

Answer:

A, C

Question 2

Question Type: MultipleChoice

When a Citrix ADC high availability (HA) pair failover occurs, by what method does the Citrix ADC communicate to the network switches and routers that IP-to-MAC address bindings have changed?

Options:

A- Reverse ARP (RARP) to update the network devices
B- MAC-based forwarding (MBF) to update the routers
C- Proxy ARP to update the network devices
D- Gratuitous ARPs (GARPs) to update the network devices

Answer:

D

Question 3

Question Type: MultipleChoice

Which two items must be true for a client to connect to an SSL offload vServer without any SSL errors? (Choose two.)

Options:

A- The server certificate is from a private certificate authority (CA).
B- The server certificate is bound to the load-balancing vServer.
C- The root certificate is installed on the Citrix ADC.
D- The root certificate is installed on the client s device.

Answer:

C, D

Question 4

Question Type: MultipleChoice

Which two items must be true for a client to connect to an SSL offload vServer without any SSL errors? (Choose two.)

Options:

A- The server certificate is from a private certificate authority (CA).
B- The server certificate is bound to the load-balancing vServer.
C- The root certificate is installed on the Citrix ADC.
D- The root certificate is installed on the client s device.

Answer:

C, D

Question 5

Question Type: MultipleChoice

Which Citrix ADC monitor can a Citrix Administrator use to check the authentication service of the Active Directory (AD) domain controller?

Options:

A- An LDAP monitor with the LDAP Script Name, Configured Base DN, Bind DN, Filter, Attribute and Password parameters in the basic parameters.
B- A ping monitor with the IP address of the AD domain controller in the special parameters
C- A MYSQL-ECV monitor with the Base DN, Bind DN, Filter, Attribute, and Password parameters configured in the basic parameters
D- A TCP monitor with the LDAP Base DN configured in the basic parameters.

Answer:

A

Explanation:

https://docs.citrix.com/en-us/citrix-adc/current-release/load-balancing/load-balancing-builtin-monitors/monitor-ldap-services.html

Question 6

Question Type: MultipleChoice

Which Citrix ADC monitor can a Citrix Administrator use to check the authentication service of the Active Directory (AD) domain controller?

Options:

A- An LDAP monitor with the LDAP Script Name, Configured Base DN, Bind DN, Filter, Attribute and Password parameters in the basic parameters.
B- A ping monitor with the IP address of the AD domain controller in the special parameters
C- A MYSQL-ECV monitor with the Base DN, Bind DN, Filter, Attribute, and Password parameters configured in the basic parameters
D- A TCP monitor with the LDAP Base DN configured in the basic parameters.

Answer:

A

Explanation:

https://docs.citrix.com/en-us/citrix-adc/current-release/load-balancing/load-balancing-builtin-monitors/monitor-ldap-services.html

Question 7

Question Type: MultipleChoice

Which profile can a Citrix Administrator create to configure a default profile that disables TLSv1?

Options:

A- DTLS
B- TCP
C- SSL
D- HTTP

Answer:

C

Question 8

Question Type: MultipleChoice

Which profile can a Citrix Administrator create to configure a default profile that disables TLSv1?

Options:

A- DTLS
B- TCP
C- SSL
D- HTTP

Answer:

C

Question 9

Question Type: MultipleChoice

Which log records detailed information such as statistics, metrics, and debug information in a proprietary binary format on the Citrix ADC?

Options:

A- Nslog
B- Nsconfig
C- Nstrace
D- Syslog

Answer:

C

Question 10

Question Type: MultipleChoice

Which log records detailed information such as statistics, metrics, and debug information in a proprietary binary format on the Citrix ADC?

Options:

A- Nslog
B- Nsconfig
C- Nstrace
D- Syslog

Answer:

C

Question 11

Question Type: MultipleChoice

Which two protocols would provide end-to-end data encryption, while allowing a Citrix ADC to optimize the responses? (Select two.)

Options:

A- HTTP protocol for the services
B- SSL bridge protocol for the vServer
C- SSL bridge protocol for the services
D- SSL protocol for the services
E- HTTP protocol for the vServer
F- SSL protocol for the vServer

Answer:

D, F

Explanation:

https://docs.citrix.com/en-us/citrix-adc/current-release/ssl/how-to-articles/end-to-end-encrypt.html

Question 12

Question Type: MultipleChoice

Which two protocols would provide end-to-end data encryption, while allowing a Citrix ADC to optimize the responses? (Select two.)

Options:

A- HTTP protocol for the services
B- SSL bridge protocol for the vServer
C- SSL bridge protocol for the services
D- SSL protocol for the services
E- HTTP protocol for the vServer
F- SSL protocol for the vServer

Answer:

D, F

Explanation:

https://docs.citrix.com/en-us/citrix-adc/current-release/ssl/how-to-articles/end-to-end-encrypt.html

P2P exams

Question 13

Question Type: MultipleChoice

Scenario: While performing a disaster recovery test, a Citrix Administrator decides to failover the Citrix ADC high availability (HA) pair appliances. The administrator notices that the failover is NOT working as expected, and the secondary Citrix ADC is NOT taking over as primary. The administrator suspects that networking issues may be causing the failure.

What could be the cause of this issue?

Options:

A- HA monitoring is enabled on an interface of the secondary node that shows as ENABLED, DOWN.
B- The Independent Network Configuration (INC) mode is enabled on the primary node.
C- HA monitoring is enabled on a disabled interface of the primary node.
D- HA heartbeats are only seen on some enabled interfaces of the secondary node.

P2P exams

Answer:

C
