# Question 1

---

**Question Type:** MultipleChoice

---

Consider the following code:

```
leaves = "no";  
season = (leaves == "yes") ? "Fall" : "Winter";  
alert("It appears " + season + " has arrived.");
```

What will this alert display?

**Options:**

---

- A- It appears fall has arrived
- B- It appears winter has arrived
- C- Yes It appears fall has arrived
- D- Yes It appears winter has arrived

**Answer:**

---

D

## Question 2

---

**Question Type:** MultipleChoice

---

Which of the following is not a benefit of Web APIs?

**Options:**

---

- A-** Web APIs are frameworks that make it easy to build applications over HTTP services that are accessible over a large range of clients.
- B-** Web APIs provide an interface for developers to write code themselves instead of using APIs developed by others .
- C-** Web APIs are best used to create resource-oriented services.
- D-** Before Web APIs developers had to write the entire code for every task they needed to perform.

**Answer:**

---

C

## Question 3

---

**Question Type:** MultipleChoice

---

Which of the following is an advantage of using the Virtual DOM?

**Options:**

---

- A-** Rendering the virtual DOM is faster than rendering the regular browser DOM.
- B-** The virtual DOM updates each element when the layout of the DOM changes, meaning that the page always reflects the most current data from the server
- C-** The Virtual DOM is not just a view layer, but also makes changes directly to the Web page
- D-** You can learn virtual DOM concepts and React libraries quickly because the libraries are simple and concise

**Answer:**

---

C

## Question 4

---

**Question Type:** MultipleChoice

---

Consider the following code:

```
var name = "Jacob";  
name.toUpperCase();  
document.write(name);
```

What change should be made to ensure that it correctly displays the value of name in all uppercase letters?

### Options:

---

- A- Line 2 should be changed to name = name . toUpperCase ();
- B- Line 2 should be changed to name .prototype . toUpperCase ();
- C- Line 3 should be changed to document. write (NAME) ;
- D- Line 1 should be changed to var name = new sting('Jaccb');

### Answer:

---

C

## Question 5

---

**Question Type:** MultipleChoice

---

Consider the following code:

```
<p id="mail-outs"></p>

<script type="text/javascript">
function addresses(street, city, state, zipcode) {
    this.street = street;
    this.city = city;
    this.state = state;
    this.zipcode = zipcode;
}

var billing = new addresses("P.O.Box 789", "Central City", "Florida", "54321");
var shipping = new addresses("123 Main Street", "Anytown", "Arizona", "98765");

document.getElementById("mail-outs").innerHTML =
"The package will be delivered to " + shipping.state + ". Company headquarters are located in " + billing.state
</script>
```

The JavaScript function above will display the following:

### Options:

---

- A-** The package will be delivered to P.O. Box 789 Central City Florida 54321 Company headquarters are located in 123 Main Street Anytown Arizona 98765
- B-** The package will be delivered to 123 Main Street Anytown Arizona 98765 Company headquarters are located in P.O Box 789 Central City Florida 541321
- C-** The package will be delivered to Arizona Company headquarters are located in Florida

D- The package will be delivered to Florida Company headquarters are located in Arizona

**Answer:**

---

A

## Question 6

---

**Question Type: MultipleChoice**

---

Ashton need to write out the items in any array as a list, with their array index number followed by their value. Which block of code will accomplish this?

A)

```
var pets = ['dog', 'cat', 'turtle'];  
  
pets.forEach(function(param1, param2) {  
    document.write(param2 + " " + param1 + " ");  
});
```

B)

```
var pets = ['dog', 'cat', 'turtle'];

pets.forEach(function(param1, param2) {
    document.write(param1 + " " + param2 + " ");
});
```

C)

```
var pets = new Array('dog', 'cat', 'turtle');

pets.forEach(function(param1, param2) {
    document.write(param1 + " " + param2 + " ");
});
```

D)

```
var pets = new Array('dog', 'cat', 'turtle');

pets.forEach(function(param1, param2) {
    document.write(pets[param1] + " "
        + pets[param2] + " ");
});
```

### Options:

---

A- Option A

B- Option B

C- Option C

D- Option D

**Answer:**

---

A

## Question 7

---

**Question Type: MultipleChoice**

---

What is the expected result when executing the following scripts in a web browser?

**Options:**

---

A- A pop-up alert box will display Fair followed by a pop-up alert box displaying Bad

B- A pop-up alert box will display Poor

C- There is an error in the code, no pop-up alert box will appear

D- Two pop-up alert boxes will appear one will display Fair and one will display Poor

**Answer:**

---

A

## Question 8

---

**Question Type:** MultipleChoice

---

How does AJAX use the XMLHttpRequest object?

```
<script type="text/javascript">
var score = 697;
if(score >= 750) { alert("Excellent"); }
if(score >= 700) { alert("Good"); }
if(score >= 650) { alert("Fair"); }
if(score >= 550) { alert("Poor"); }
else { alert("Bad"); }
</script>
```

**Options:**

---

- A-** It changes a portion of a Web page so only the affected part of the page will be reloaded
- B-** It provides Web page compatibility with mobile device browsers

**C-** It performs code validation on the server-side in order to speed up the process of validation

**D-** It provides backward-compatibility with older browser versions

**Answer:**

---

B

## Question 9

---

**Question Type:** MultipleChoice

---

Which of the following comparison statements will return true?

**Options:**

---

**A-** X = 15 ;

Y = 3 ;

X == y ;

**B-** X=15

Y=3;

X +==45;

**C-** X = 15

Y = 3;

X !== y;

**D-** X = 15

Y = 3

X === y;

**Answer:**

---

C

## Question 10

---

**Question Type:** MultipleChoice

---

Consider the following code:

```
<script type="text/javascript">
var myArray = new Array("Franna", "Diana", "Lana");
myArray.sort();
myArray.push("Hannah");
document.write(myArray);
</script>
```

What is the result of running this script in a Web browser?

**Options:**

---

- A- Hannah Lana.Franna.Diana
- B- Diana Franna Hannah Lana
- C- Hannah Diana Franna Lana
- D- Diana Franna Lana Hannah

**Answer:**

---

B

## Question 11

---

**Question Type: MultipleChoice**

---

Consider the following two code segments:

**Segment 1**

```
var i = 5;  
do {  
    // other code here  
} while(i < 5);
```

**Segment 2**

```
var i = 5;  
while(i < 5) {  
    // other code here  
}
```

Which of the following is true about these code segments?

**Options:**

---

- A- The code in both segments will cause an infinite loop
- B- The code in Segment 2 will execute one time
- C- The code in both segments will not execute at all
- D- The code in Segment 1 will execute one time

**Answer:**

---

D
